CORN & SOYBEAN

Product Guide 2027

STINE® HAS YIELD

A MESSAGE FROM MYRON STINE

At Stine® Seed Company, our core purpose is simple: **We want to help growers make money by maximizing yield with the industry's best corn and soybean genetics.**

As a farmer, every decision comes with its own set of challenges. You already face enough unknowns when it comes to yield, profitability and risk — your seed selection shouldn't be one of them. With Stine, you get a trusted partner focused on protecting your operation and maximizing your return on investment.

How we deliver on this expectation is guided by three core pillars:

Breeding innovation. Our breeding programs help bring new advancements to growers faster, leading to better product placement, clearer conversations and fewer in-season surprises.

Family values. As a family-owned company, we take a long-term approach built on relationships, accountability and straightforward service.

Farmer results. Farmer results drive everything we do, from placing the right product on the right acre to providing support before, during and after planting.

Guided by these core pillars, Stine delivers consistency, confidence and strong decision-making to our customer relationships, even in the most challenging seasons.

Thanks for your continued trust in our brand, and may 2027 be your best season yet.

Yours in yield,

M. E. Stine

STINE® CORN
LINEUP

Home to one of the industry's largest corn breeding programs, Stine® is developing the hybrids of the future. With exclusive genetics and top-tier trait packages, our lines stand strong against the competition.

STINE® 9105-10 *BRAND*

Relative Maturity Range	*83–85 days*
Harvest Population *Wide Row 105%* *Narrow Row 110%*	*GDU* *2150*
Glyphosate Tolerant *YES*	*Glufosinate Tolerant* *YES*

Agrisure 3010

Stine 9105-10 brand corn offers two herbicide modes of action for ultimate in-season weed control. This line also features excellent protection against yield-robbing pests, such as European and southwestern corn borer. 9105-10 has good roots and stalks for season-long standability, along with very good emergence and early-season vigor. It is broadly adaptive across yield environments and performs best at higher planting populations.

STINE® 9213-G *BRAND*

Relative Maturity Range	*85–87 days*
Harvest Population *Wide Row 105%* *Narrow Row 110%*	*GDU* *2190*
Glyphosate Tolerant *YES*	*Glufosinate Tolerant* *NO*

StineGT

Stine 9213-G brand corn is a proven winner with excellent performance across the board. It features outstanding agronomics, which consistently take this line to the top of the yield curve. 9213-G is widely adapted across early northern markets west to east and has a positive response to in-season fungicide applications. Plant it at higher populations to achieve optimum results.

STINE® 9214-20 *BRAND*

Relative Maturity Range	*85–87 days*
Harvest Population *Wide Row 100%* *Narrow Row 105%*	*GDU* *2190*
Glyphosate Tolerant *YES*	*Glufosinate Tolerant* *YES*

Agrisure Above

Stine 9214-20 brand corn features best-in-class above-ground protection from pests, such as corn earworm and western bean cutworm. Growers also have the advantage of two herbicide modes of action to help manage hard-to-control weeds. 9214-20 features a taller plant type for variable to lighter soil types and produces good silage values. It performs east to west, has excellent roots and stalks, and has a positive response to fungicide applications, making it a solid choice on every operation.

STINE® 9215-20 BRAND

Relative Maturity Range	88–90 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2315
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Agrisure® Above

Stine 9215-20 brand corn is a high-yielding line that performs best when placed on average- to high-yielding soils and boasts excellent agronomics — from stalks to root structure — for strong season-long performance. Its taller plant structure produces good silage values and responds to higher management with outstanding early-season vigor. 9215-20 also has a positive response to fungicide applications.

STINE® 9320-20 BRAND

Relative Maturity Range	90–92 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2320
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Agrisure® Viptera™ 3110A

Stine 9320-20 brand corn features strong genetics and is a widely adapted Artesian® option with top-end yield potential. This broadly adaptive line can be used as an early- or full-season choice, with good ear flex for various field conditions. It features good leaf disease and tar spot protection, as well as excellent cold emergence and stalk strength.

STINE® 9322-10 BRAND

Relative Maturity Range	93–95 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2380
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Agrisure® 3010

Stine 9322-10 brand corn is a broadly adaptive corn line suited for all yield environments. It has excellent yield performance and standability, and its agronomics make it a great choice in this maturity zone. 9322-10 features a taller plant type with very good roots and excellent stalks. It performs best at higher planting populations.

STINE® 9461-32 BRAND

Relative Maturity Range	95–97 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2400
Glyphosate Tolerant YES	Glufosinate Tolerant YES

DuracadeViptera™ REFUGE RENEW™

Stine 9461-32 brand corn is a broadly adaptive corn line suited for a broad geographic adaptation. It has excellent yield performance, and its agronomics help combat diseases, such as tar spot, making it a great choice in this maturity zone and as an early option for southern movement. This dual-purpose line is a taller plant type with excellent roots and stalks and superior silage characteristics.

STINE® 9445-20 BRAND

Relative Maturity Range	97–99 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2430
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Agrisure® Above

Stine 9445-20 brand corn features above-ground insect control with very good stress tolerance. This line also boasts a strong foliar disease package, including protection against tar spot, and high test weight. It features a taller plant type with good silage values. Plant this as a full-season line for greatest success. For optimum performance, plant 9445-20 on loam to variable soil types.

NEW

STINE® E481-G BRAND

Relative Maturity Range	97–99 days
Harvest Population Wide Row 108% Narrow Row 112%	GDU 2430
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine E481-G brand corn is a new version of the widely sold MX481-G, bringing an additional 4% yield increase and standability. This line has demonstrated consistent success west to east and is a must-plant for every farming operation. It performs best at higher planting populations and is protected with our premium seed treatment. E481-G led Stine's Mid Elite Yield Trials at over 111%.

A SEED PARTNER
WHO STANDS BEHIND
EVERY DECISION.
STINE
STINE
STINE® HAS YIELD
LIVE YOUR LIFE YOUR WAY

STINE® 9444-22 BRAND

Relative Maturity Range	98–100 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2450
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Duracade® REFUGE RENEW™

Stine 9444-22 brand corn features above- and below-ground insect protection. It is a taller, showy line with solid protection against leaf diseases, such as tar spot. Growers have the flexibility to use two herbicide modes of action for season-long protection against troublesome weeds with this line. 9444-22 is a strong choice for variable soils with very good stress tolerance and serves as a dual-purpose option for silage acres.

NEW

STINE® E530-0 BRAND

Relative Maturity Range	102–104 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2550
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine E530-0 brand corn is a high-yielding line with an excellent moderately tall ear placement. It performed at 113% in Stine's Early-Mid Elite Trials and features our premium seed protection for fast starts and outstanding early-season growth. E530-0 has a semi-fixed ear, allowing for increased populations and maximum yield potential.

STINE® 9531-22 BRAND

Relative Maturity Range	102–104 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2550
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Duracade® REFUGE RENEW™

Stine 9531-22 brand corn is a widely adapted Artesian® option and a top-yield contender with a semi-flex ear. It features very good agronomics, including root structure, plant health and intactness for standability, making it an excellent choice as a full- or early-season line. 9531-22 also has a strong response to foliar fungicide.

NEW

STINE® 9532-30 BRAND

Relative Maturity Range	102–104 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2535
Glyphosate Tolerant YES	Glufosinate Tolerant NO

Trecepta® TECHNOLOGY

Stine 9532-30 brand corn is a new Trecepta®-traited line with above-ground protection. It features a flex-style ear with good stalks and roots and has shown very good protection against greensnap. 9532-30 performs best when treated as an offensive hybrid within its zone and north of its zone.

STINE® 9453-G BRAND

Relative Maturity Range	103–105 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2600
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT®

Stine 9453-G brand corn is a solid choice for refuge acres or those not needing insect protection. Its very good root and stalk strength is excellent for standability, and it's one of our short-stature corn options with an ear height of more than 40 inches. 9453-G performs best at higher planting populations.

STINE® 9662-20 BRAND

Relative Maturity Range	105–106 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2650
Glyphosate Tolerant YES	Glufosinate Tolerant NO

VT DoublePRO®

Stine 9662-20 brand corn features two modes of action for above-ground insect control. In environments with heavy disease pressure, a midseason fungicide application is recommended. 9662-20 is best positioned on loam or variable soil types at moderate populations. It features excellent drydown, good ear flex, excellent test weight and strong top-end yield.

NEW

STINE® 9670-20 BRAND

Relative Maturity Range	106–108 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2572
Glyphosate Tolerant YES	Glufosinate Tolerant NO

VTDoublePRO®

Stine 9670-20 brand corn features two modes of action for above-ground insect control. It has high-yield potential with a broad west-to-east footprint and very good protection against greensnap and Goss's wilt. Fields with heavy gray leaf spot pressure would benefit from a midseason fungicide application.

STINE® 9691-33 BRAND

Relative Maturity Range	108–110 days
Harvest Population Wide Row 100% Narrow Row 100%	GDU 2603
Glyphosate Tolerant YES	Glufosinate Tolerant YES

SmartStax® PRO with RNAi TECHNOLOGY

Stine 9691-33 brand corn offers six modes of action against above- and below-ground pests. It is a great choice for corn-on-corn acres with a positive response to a midseason fungicide and nitrogen application. It has a flex-type ear that is widely adapted west to east. This line features very good test weight, drought tolerance, stay green and intactness.

NEW

STINE® 9690-30 BRAND

Relative Maturity Range	108–110 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2670
Glyphosate Tolerant YES	Glufosinate Tolerant NO

Trecepta® TECHNOLOGY

Stine 9690-30 brand corn is an early-flowering line with above-ground protection. It excels in variable soil types and features a girthy ear with higher test weight. For optimum results, a midseason fungicide application is recommended in fields with high leaf disease pressure.

STINE® 9728E-G BRAND

Relative Maturity Range	109–111 days
Harvest Population Wide Row 90% Narrow Row 95%	GDU 2725
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine 9728E-G brand corn is a proven line for variable, tougher soils and lower planting populations. Very good roots and stalks along with a flex ear and a very good disease package make it a favorite of many.

STINE® 9734-G BRAND

Relative Maturity Range	109–111 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2750
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine 9734-G brand corn is a widely adapted, proven winner featuring glyphosate tolerance. Solid agronomics coupled with standability make this a great choice for every farming operation. 9734-G continues to be a workhorse in this maturity throughout the Corn Belt. It's broadly adaptive across yield environments and makes an excellent early-season option for the South and full-season choice for the North.

STINE® 9756-G BRAND

Relative Maturity Range	109–111 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2750
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine 9756-G brand corn is well suited for refuge acres or those not needing insect protection. It is a short-stature corn option with excellent root structure and good stalks for ideal standability. 9756-G is widely adapted and works well across a wide range of yield environments.

STINE® 9755-20 BRAND

Relative Maturity Range	110–112 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2775
Glyphosate Tolerant YES	Glufosinate Tolerant NO

VTDoublePRO®

Stine 9755-20 brand corn moves north to south very well and is broadly adaptive across yield environments. It features two modes of action against above-ground pests for outstanding protection and has a positive response to fungicide in environments with heavy disease pressure. 9755-20 performs best on rotated acres.

STINE® 9721-30 BRAND

Relative Maturity Range	111–113 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2654
Glyphosate Tolerant YES	Glufosinate Tolerant NO

Trecepta® TECHNOLOGY

Stine 9721-30 brand corn is an offensive, robust line with very good drought tolerance. It also features very good roots and above-average tolerance to crown rot. 9721-30 is a taller plant type with high ear placement. It's widely adapted and suitable for all yield environments with good protection against greensnap and Goss's wilt.

STINE® 9752-32 BRAND

Relative Maturity Range	111–113 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2800
Glyphosate Tolerant YES	Glufosinate Tolerant YES

DuracadeViptera™ REFUGE RENEW™

Stine 9752-32 brand corn offers best-in-class above- and below-ground insect protection. It is a great choice for your corn-on-corn acres with a positive response to a midseason fungicide and nitrogen application. The taller, showy plant type makes it an excellent option for silage, and it works well in all row widths. 9752-32 is broadly adaptive across yield environments as a full-season choice. Using a fungicide is recommended for corn-on-corn operations.

STINE® 9754-20 BRAND

Relative Maturity Range	112–114 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2708
Glyphosate Tolerant YES	Glufosinate Tolerant NO

DroughtGard® HYBRIDS VTDoublePRO®

Stine 9754-20 brand corn demonstrates top-end yield with very good test weight and two modes of action against above-ground pests. It is a widely adapted DroughtGard® line with excellent late-season appearance. 9754-20 is agronomically strong and performs best on higher-management acres, where it can reach its full potential.

NEW STINE® 9757-30 BRAND

Relative Maturity Range	113–115 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2700
Glyphosate Tolerant YES	Glufosinate Tolerant NO

Trecepta® TECHNOLOGY

Stine 9757-30 brand corn is a widely variable line for all yield environments from west to east. Its semi-flex ear type allows you to push the populations to maximize full yield potential as well as reduce the populations for those lower-yield environments. 9757-30 is a taller plant and will serve as a dual-purpose silage option.

STINE® 9753-20 BRAND

Relative Maturity Range	114–116 days
Harvest Population Wide Row 100% Narrow Row 110%	GDU 2825
Glyphosate Tolerant YES	Glufosinate Tolerant NO

VTDoublePRO®

Stine 9753-20 brand corn is agronomically strong and a top contender for silage acres. It is broadly adaptive across yield environments with southern movement and boasts two modes of action against above-ground pests. It is a tall, robust plant type with lower greensnap risk, and its large root mass and brace roots are good for tougher soils, along with ear flex for moderate planting populations. 9753-20 has a positive response to fungicide in environments with heavy disease pressure and features high yield coupled with test weight.

STINE® 9808E-0 BRAND

Relative Maturity Range	114–116 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2825
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine 9808E-0 brand corn has proven high-yield potential on highly productive soils as a conventional option. The line performs in variable soil types, responds to higher-management practices and works well in all row widths. It features excellent roots and stalks for strong standability and has very good disease protection. For optimum performance, make sure the soil temperature is on the warming trend.

STINE® 9808E-G BRAND

Relative Maturity Range	114–116 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2825
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine 9808E-G brand corn has proven high-yield potential on highly productive soils as a glyphosate-tolerant option. The line performs in variable soil types, responds to higher-management practices and works well in all row widths. It features excellent roots and stalks for strong standability and has very good disease protection. For optimum performance, make sure the soil temperature is on the warming trend.

STINE® 9808E-20 BRAND

Relative Maturity Range	114–116 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2825
Glyphosate Tolerant YES	Glufosinate Tolerant YES

AgrisureViptera 3110

Stine 9808E-20 brand corn has proven high-yield potential on highly productive soils and offers two modes of action for above-ground insect control. The line performs in variable soil types, responds to higher-management practices and works well in all row widths. It features excellent roots and stalks for strong standability and has very good disease protection. For optimum performance, make sure the soil temperature is on the warming trend.

NEW

STINE® 9850-30 BRAND

Relative Maturity Range	115–116 days
Harvest Population Wide Row 100% Narrow Row 100%	GDU 2825
Glyphosate Tolerant YES	Glufosinate Tolerant NO

Trecepta® TECHNOLOGY

Stine 9850-30 brand corn is a high-yielding line built for variable soil types. It features low greensnap risk with protection against Goss's wilt. For optimum placement, keep 9850-30 off fields with a history of tar spot, plan at least one fungicide application and harvest timely for maximum yield.

STINE® 9817-30 BRAND

Relative Maturity Range	115–117 days
Harvest Population Wide Row 90% Narrow Row 95%	GDU 2875
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Viptera®

Stine 9817-30 brand corn features multiple modes of action for above-ground protection against yield-robbing insects. It's broadly adaptive across yield environments, has excellent stalk and root structure, and is a taller plant type, making it a great option for silage acres or wider row widths.

STINE® 9818-32 BRAND

Relative Maturity Range	116–118 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2870
Glyphosate Tolerant YES	Glufosinate Tolerant YES

DuracadeViptera™ REFUGE RENEW™

Stine 9818-32 brand corn is a full-season option with best-in-class above- and below-ground insect protection. It offers excellent agronomic disease tolerance, including leaf disease protection, and dual herbicide modes of action for flexibility in weed control. 9818-32 is broadly adaptive across yield environments with great north-to-south adaptability. It is a taller plant type that works well in all row widths.

STINE® 9891-20 BRAND

Relative Maturity Range	118–120 days
Harvest Population Wide Row 100% Narrow Row 105%	GDU 2631
Glyphosate Tolerant YES	Glufosinate Tolerant NO

VT DoublePRO®

Stine 9891-20 brand corn is agronomically strong and a top contender for silage acres. It is a tall, robust plant type with a semi-flex ear and a wide plant canopy. 9891-20 has a positive response to fungicide in environments with heavy disease pressure. This line performs best in its zone and south of its zone.

MX SERIES CORN
BY STINE®

Now delivering the most superior corn genetics in the industry. Take your yields to the MAX with MX Series Corn by Stine®.

NEW

STINE® MX250-10 *BRAND*

Relative Maturity Range	*84–86 days*
Harvest Population *Wide Row 105%* *Narrow Row 110%*	*GDU* *2190*
Glyphosate Tolerant *YES*	*Glufosinate Tolerant* *YES*

Agrisure3010

Stine MX250-10 brand corn offers two herbicide modes of action for ultimate in-season weed control. This line also features excellent protection against yield-robbing pests, such as European and southwestern corn borer. MX250-10 has very good roots and excellent stalks for season-long standability, along with very good emergence and early-season vigor. It is broadly adaptive across yield environments and performs best at higher planting populations.

STINE® MX261-0 *BRAND*

Relative Maturity Range	*84–86 days*
Harvest Population *Wide Row 105%* *Narrow Row 110%*	*GDU* *2190*
Glyphosate Tolerant *NO*	*Glufosinate Tolerant* *NO*

PREMIUM GENETICS HYBRID SEED CORN

Stine MX261-0 brand corn is a high-yielding line with high test weight designed to perform best at increased planting populations as a full-season option. It has a positive response to in-season management and features an industry-leading fungicide and insecticide treatment. This is an excellent line for high-management acres using a conventional herbicide system. MX261-0 yielded 108.3% in Stine's Elite Yield Trials.

NEW

STINE® MX261-G *BRAND*

Relative Maturity Range	*85–87 days*
Harvest Population *Wide Row 105%* *Narrow Row 110%*	*GDU* *2200*
Glyphosate Tolerant *YES*	*Glufosinate Tolerant* *NO*

StineGT

Stine MX261-G brand corn is a high-yielding, glyphosate-tolerant line with high test weight designed to perform best at increased planting populations as a full-season option. It has a positive response to in-season management and features an industry-leading fungicide and insecticide treatment. This is an excellent line for high-management acres targeting maximum yields. Supply will be limited.

NEW STINE® MX280-0 BRAND

Relative Maturity Range	87–89 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2300
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX280-0 brand corn is a new conventional line that performs best at higher populations. It features very good roots and stalks and will respond to in-season management. MX280-0 yielded 113% in Stine's Elite Yield Trials. Supply will be limited.

NEW STINE® MX320-G BRAND

Relative Maturity Range	91–93 days
Harvest Population Wide Row 105% Narrow Row 111%	GDU 2325
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

MX320-G brand corn is a fuller-season version of our new MX280-0. It features very good roots and stalks to provide season-long standability. These genetics respond to higher planting populations and in-season management. MX320-G achieves optimum performance in its zone and north of its zone, and it works well in all row configurations. Supply will be limited.

NEW STINE® MX321-10 BRAND

Relative Maturity Range	91–93 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2325
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Agrisure3010

Stine MX321-10 brand corn is a high-yielding line designed to perform best at increased planting populations as a full-season option. It boasts very good root and excellent stalk strength with stress tolerance and features an industry-leading fungicide and insecticide treatment. This is an excellent line with medium-tall ear placement for acres that need corn borer protection, with the flexibility of both glyphosate and glufosinate tolerance.

NEW STINE® MX330-0 BRAND

Relative Maturity Range	92–94 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2350
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX330-0 brand corn is a high-yielding conventional option for growers using a conventional herbicide program. It is a medium-tall line with excellent ear placement, making it suitable for all row widths and variable soil types. MX330-0 performed at over 105% in Stine's Early Elite Yield Trials.

NEW STINE® MX331-0 BRAND

Relative Maturity Range	92–94 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2350
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX331-0 brand corn is another 93RM high-yielding conventional option with excellent standability. It offers a taller plant type without sacrificing standability. MX331-0 performed at over 105% in Stine's Early Elite Yield Trials.

STINE® MX451-0 BRAND

Relative Maturity Range	94–96 days
Harvest Population Wide Row 108% Narrow Row 112%	GDU 2400
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX451-0 brand corn is a high-yielding line designed to perform best at increased planting populations as a full-season option. It boasts excellent root and stalk strength with stress tolerance and features an industry-leading fungicide and insecticide treatment. This is a strong refuge line for all row widths with medium-tall ear placement. MX451-0 yielded 108% in Stine's Early Elite Yield Trials.

STINE® MX452-G BRAND

Relative Maturity Range	94–96 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2400
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX452-G brand corn is a mid-90-day glyphosate-tolerant line, providing another option for all row width and soil types. It features our premium seed protection for fast starts and outstanding early-season growth. MX452-G performs best when planting populations are increased by 5%–10% over standard populations.

NEW

STINE® MX453-0 BRAND

Relative Maturity Range	94–96 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2400
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX453-0 brand corn features new Stine elite genetics with good east-to-west movement in its maturity zone and some north-to-south potential. To achieve maximum yield potential, increase planting populations by 5%–10%, and it would benefit from in-season management. MX453-0 performed at over 103% in Stine's Early Elite Yield Trials and 110.9% in Stine's Early-Mid Elite Yield Trials.

STINE® MX471-G BRAND

Relative Maturity Range	96–98 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2425
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX471-G brand corn is a high-yielding line designed to perform best at increased planting populations as a full-season option. This is an excellent refuge line for all row widths with medium-tall ear placement. It boasts very good root and excellent stalk strength with stress tolerance and features an industry-leading fungicide and insecticide treatment. MX471-G yielded 108% in Stine's Early-Mid Elite Yield Trials.

NEW

STINE® MX472-G BRAND

Relative Maturity Range	96–98 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2425
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX472-G brand corn is a high-yielding, glyphosate-tolerant line for growers wanting to use glyphosate. It is moderately tall with excellent standability, making it a great fit for rolling hills and all row widths. MX472-G performed at 105% in Stine's Early Elite Yield Trials.

STINE® MX481-G BRAND

Relative Maturity Range	97–99 days
Harvest Population Wide Row 108% Narrow Row 112%	GDU 2430
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX481-G brand corn has shown outstanding, stable yield performance potential and is designed to perform best at increased planting populations. These newer, proven Stine genetics have consistently performed near 110% in four years of Elite Yield Trials testing, with a 9% average advantage over competitive products. This is an excellent, widely adapted choice for all row widths with very good root and stalk strength, stress tolerance, and medium-tall plant height and semi-fixed ear placement that help optimize yield in higher planting populations.

STINE® MX482-G BRAND

Relative Maturity Range	97–99 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2430
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX482-G brand corn is a high-yielding line designed to perform best at increased planting populations as a full-season option. This is an excellent refuge line for all row widths with medium-tall ear placement. It boasts very good root and stalk strength with stress tolerance and features an industry-leading fungicide and insecticide treatment. MX482-G yielded 109.7% in Stine's Elite Yield Trials.

STINE® MX483-0 BRAND

Relative Maturity Range	97–99 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2430
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX483-0 brand corn features Stine conventional genetics, premium seed protection for fast starts and outstanding early-season growth. It performs best in high-population, narrow-row environments but works well in any row configuration. MX483-0 features a medium-tall plant height, has a good disease package and is highly recommended on loam soils.

NEW STINE® MX483-10 BRAND

Relative Maturity Range	98–100 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2450
Glyphosate Tolerant YES	Glufosinate Tolerant YES

Agrisure 3010

Stine MX483-10 brand corn is a new corn borer-protected line that allows growers to spray both glyphosate and glufosinate, providing more chemical options for the farm. A medium-tall plant with perfect ear height offers flexibility across all row widths and terrain. MX483-10 performs best in higher populations on loam-type soils. It yielded over 107% in Stine's Early-Mid Elite Yield Trials.

STINE® MX511-0 BRAND

Relative Maturity Range	100–102 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2500
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX511-0 brand corn is a high-yielding line designed to perform best at increased planting populations as a full-season option. This is an excellent refuge line for all row widths with medium-tall ear placement. It boasts very good root and stalk strength with stress tolerance and features an industry-leading fungicide and insecticide treatment. MX511-0 yielded 104% in Stine's Elite Yield Trials.

STINE® MX445-G BRAND

Relative Maturity Range	101–103 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2525
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX445-G brand corn is proven to be high-yielding and is designed to perform best at increased planting populations as a full-season option. It features a medium plant type with medium ear placement and excels in all row widths. Boasting an agronomically strong root structure and stalks, it is a must-plant on every farming operation. MX445-G also offers very good leaf disease protection and features an industry-leading fungicide and insecticide treatment. It yielded 103% in 2025, with four-year data near 108% in Stine's Early-Mid Elite Yield Trials.

STINE® MX521-G BRAND

Relative Maturity Range	101–103 days
Harvest Population Wide Row 108% Narrow Row 112%	GDU 2525
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX521-G brand corn is proven to be high-yielding and is designed to perform best at increased planting populations (108%) as a full-season option. It features a medium-tall plant type with medium-tall ear placement and excels in all row widths. MX521-G has a positive response to in-season management when lighter soils or high disease pressure is present. It yielded 106% in Stine's Elite Yield Trials and delivered one of the best standability scores.

STINE® MX522-0 BRAND

Relative Maturity Range	101–103 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2525
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX522-0 brand corn is proven to be high-yielding and is designed to perform best at increased planting populations as a full-season option. This is a medium-height line with good ear height that excels in higher-management acres, including sulfur applications. It yielded a two-year average of 105.2% in Stine's Early-Mid Elite Yield Trials.

NEW

STINE® MX540-0 BRAND

Relative Maturity Range	104–106 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2600
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX540-0 brand corn is an ideal conventional line for acres not using glyphosate. Its high-yield potential and excellent standability shine in all row widths and at increased planting populations. MX540-0 performed at 113% in Stine's Early-Mid Elite Trials.

STINE® MX551-G BRAND

Relative Maturity Range	104–106 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2650
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT

Stine MX551-G brand corn is a high-yielding line designed to perform best at increased planting populations as a full-season option. This is an excellent choice for all row widths, as it features a medium-tall plant type with medium-tall ear placement, along with very good roots and stalks and stress tolerance. MX551-G excels in high-management acres with an application of sulfur. It also features an industry-leading fungicide and insecticide treatment and yielded a two-year average of 108% in Stine's Early-Mid Elite Trials.

STINE® MX553-0 BRAND

Relative Maturity Range	104–106 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2650
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX553-0 brand corn is a proven winner as a conventional option for this maturity zone and north. It's a medium-tall plant type with medium-tall ear placement that works well in all row widths and excels at increased planting populations. In Stine's Early-Mid Elite Yield Trials, it yielded a two-year average of 109.1%. MX553-0 also features an industry-leading fungicide and insecticide treatment.

STINE® MX603-0 BRAND

Relative Maturity Range	105–107 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2650
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX603-0 brand corn is one of our proven conventional options — featuring Stine conventional genetics — for this maturity zone and north. It's a medium-tall plant type with medium-tall ear placement that works well in all row widths and excels at increased planting populations. It has excellent standability and yielded a 108% four-year average in Stine's Early-Mid Elite Yield Trials. MX603-0 also features an industry-leading fungicide and insecticide treatment.

NEW

STINE® MX670-G BRAND

Relative Maturity Range	105–107 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2650
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT+

Stine MX670-G brand corn is an exciting new glyphosate-tolerant line that performs best at higher planting populations and with in-season management. It features our premium seed protection for fast starts and outstanding early-season growth.

NEW

STINE® MX680-G BRAND

Relative Maturity Range	107–109 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2700
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT+

Stine MX680-G brand corn is one of the taller options in the MX lineup and has excellent standability. It is suitable for all row spacings and soil types. MX680-G is a great refuge option for fields where you can monitor for insect pressure. It performed at nearly 104% in Stine's Elite Yield Trials. Supply will be limited.

NEW

STINE® MX690-G *BRAND*

Relative Maturity Range	107–109 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2700
Glyphosate Tolerant YES	Glufosinate Tolerant NO

StineGT+

Stine MX690-G brand corn is a new high-yielding, glyphosate-tolerant line that can be used as a stand-alone or refuge option for traited acres. It features our premium seed protection for fast starts and outstanding early-season growth. To maximize yield potential, planting populations should be increased by 5%–10%.

STINE® MX605-0 *BRAND*

Relative Maturity Range	108–110 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2725
Glyphosate Tolerant NO	Glufosinate Tolerant NO

PREMIUM GENETICS HYBRID SEED CORN

Stine MX605-0 brand corn is one of our proven conventional options — featuring Stine conventional genetics — for this maturity zone and north. It's a medium plant type with medium-tall ear placement that works well in all row widths and excels at increased planting populations. MX605-0 features an industry-leading fungicide and insecticide treatment and yielded 106% in Stine's Elite Yield Trials.

STINE® MX605-G *BRAND*

Relative Maturity Range	108–110 days
Harvest Population Wide Row 105% Narrow Row 110%	GDU 2725

Additional agronomic information for certain hybrids will be available in the fall/winter 2026.

STINE®
ENLIST E3®
SOYBEAN LINEUP

Stine® Enlist E3® soybeans deliver the high-yielding genetics growers expect from Stine, paired with maximum herbicide flexibility through three modes of action: 2,4-D choline, glyphosate and glufosinate. It's a powerful combination to ensure performance and control even the toughest weeds.

STINE® 009EG32 *BRAND*

Maturity	*009*
SCN Resistant	*Brown Stem Rot Susceptible*
Rps Gene 3a	*Height Medium*

Stine 009EG32 brand is a proven high-yielding soybean in the 00 maturity. It features very good protection against Phytophthora root rot with the Rps3a gene and good performance against Sclerotinia white mold and sudden death syndrome. Plant 009EG32 in any row width across soil types at moderate populations.

STINE® 01EH32 *BRAND*

Maturity	*01*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene 3a	*Height Medium*

Stine 01EH32 brand is broadly adaptive to soil types. It features a medium plant height that stands well and works best in wide row widths. 01EH32 responds to higher-yielding management practices and offers Phytophthora root rot resistance with the Rps3a gene and good tolerance to Sclerotinia white mold.

STINE® 02EJ13 *BRAND*

Maturity	*02*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene 1k	*Height Medium*

Stine 02EJ13 brand is a nice, bushy soybean that delivers a significant yield bump with good standability in 20-inch or wider row widths. 02EJ13 features Rps1k Phytophthora root rot resistance and brown stem rot resistance. It's a great-looking soybean with consistently strong performance. For best results, use a seed treatment where sudden death syndrome is a concern.

STINE® 03EJ02 BRAND

Maturity	03
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 03EJ02 brand is a medium-height line with great yield potential. For best performance, plant it in narrow-row, high-population environments on moderate- to well-drained soils. Its good iron deficiency chlorosis performance also allows for planting in poorly drained calcareous soils. If Sclerotinia white mold presence is possible, widen rows to enable air movement between rows.

STINE® 04EJ02 BRAND

Maturity	04
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 04EJ02 brand is a semi-branching, workhorse-style soybean that combines high-yield potential with solid disease protection. Plant it in 20-inch or wider row configurations in moderate- to high-population environments across soil types to see its elevated performance. 04EJ02 is strong against sudden death syndrome and does well against iron deficiency chlorosis and Sclerotinia white mold pressure.

STINE® 05EG26 BRAND

Maturity	05
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 3a	Height Medium

Enlist E3 SOYBEANS

Stine 05EG26 brand is a medium-height, fuller plant type that performs best in wide rows. This line is agronomically strong with protection from iron deficiency chlorosis and Sclerotinia white mold. 05EG26 is broadly adaptive and works well when planted in poorly drained soils.

NEW

STINE® 05EK12 BRAND

Maturity	05
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 05EK12 brand has strong tolerance to Sclerotinia white mold, paired with very good standability within its inline phenotype. It is a solid salt excluder line that travels well across soil types and can be put in narrow-row, high-population environments. If planting in poorly drained soils, apply a treatment and watch out for carbonate levels within the iron deficiency chlorosis world.

NEW

STINE® 05EK02 BRAND

Maturity	05/06
SCN Resistant	Brown Stem Rot –
Rps Gene S	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 05EK02 brand brings forward a very good-standing soybean with a semi-branching plant structure. This medium- to moderately tall line can be planted in marginal ground and maintain height at moderate populations. If planting in poorly drained soils, apply a treatment for additional Phytophthora root rot and sudden death syndrome coverage.

NEW

STINE® 07EK31 BRAND

Maturity	07
SCN Resistant	Brown Stem Rot Resistant
Rps Gene H1c	Height Medium

Enlist E3 SOYBEANS

Stine 07EK31 brand is the sister to 08EJ32 and has solid, consistent defensive tolerances that provide broad-acre coverage in the northern regions. 07EK31 has good tolerance to iron deficiency chlorosis, sudden death syndrome and Sclerotinia white mold. Plant it early at moderate populations across variable soil types to enable the high yield it brings forward.

Patent Information at soybeangermplasmpatent.com.

STINE® 08EC02 *BRAND*

Maturity	*08*
SCN Resistant	*Brown Stem Rot Susceptible*
Rps Gene S	*Height Medium*

Stine 08EC02 brand is agronomically strong, with very good standability and a well-rounded disease package, including protection against iron deficiency chlorosis, sudden death syndrome and Sclerotinia white mold. 08EC02 is broadly adaptive and responds to higher-yielding management practices. Its medium plant height works well in narrow-row widths and moves well between marginal and productive soils.

STINE® 08EC32 *BRAND*

Maturity	*08*
SCN Resistant	*Brown Stem Rot Susceptible*
Rps Gene 1c3a	*Height Medium*

Stine 08EC32 brand is a proven winner, featuring Rps1c3a for Phytophthora root rot resistance. This medium-height line prefers wide rows and offers protection against Sclerotinia white mold and sudden death syndrome. 08EC32 performs well on poorly drained soils, with a history of high pH or iron deficiency chlorosis tolerance.

STINE® 08EG62 *BRAND*

Maturity	*08*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene 1c	*Height Medium*

Stine 08EG62 brand is related to 25EG20. This much-earlier option prefers lighter, sandier soils and does especially well in wider row spacings. 08EG62 features Rps1c Phytophthora root rot resistance, good tolerance to iron deficiency chlorosis and sudden death syndrome, and resistance to brown stem rot.

STINE® 08EJ32 *BRAND*

Maturity	*08*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene 1c	*Height Medium*

Stine 08EJ32 brand is a newer line that combines high-yield potential and iron deficiency chlorosis performance into one option. 08EJ32 yielded a massive 107% of trend in Stine's Elite Yield Trials and also features good tolerance to iron deficiency chlorosis and sudden death syndrome. Rps1c Phytophthora root rot resistance allows for planting in poorly drained soils with narrow-row, high-population strategies.

STINE® 10EG29 *BRAND*

Maturity	*10*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene S	*Height Medium*

EXCLUSIVE LINE FOR 2027

Stine 10EG29 brand exhibits higher-than-average oil content. This line works well in a wide range of row widths with good standability. Agronomically, 10EG29 is strong against Sclerotinia white mold and has good tolerance to iron deficiency chlorosis. It is a defensive powerhouse when it needs to be but also delivers yield on highly productive ground.

STINE® 10EH02 *BRAND*

Maturity	*10*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene 1c	*Height Medium/ Moderately Tall*

Stine 10EH02 brand features a medium- to moderately tall plant height with very good standability, making it adaptable to nearly any row configuration and all soil types. It has good tolerance to iron deficiency chlorosis and sudden death syndrome and strong tolerance to Sclerotinia white mold due to its inline-style plant type. Plant 10EH02 in narrow-row, moderate- to high-population strategies for best results.

YOU TRUST.
STINE
STINE HAS YIELD
LIVE YOUR LIFE YOUR WAY

NEW

STINE® 11EK39 BRAND

Maturity	11
SCN Peking	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

Stine 11EK39 brand brings a unique Peking soybean forward with desirable characteristics for variable soil types in high-population environments. It has good tolerance to Sclerotinia white mold, iron deficiency chlorosis and sudden death syndrome, meaning you can plant it early in any row strategy and expect this soybean to excel. 11EK39 has excellent plant health throughout the season and offers supreme standability.

STINE® 12EB32 BRAND

Maturity	12
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

Stine 12EB32 brand is an excellent early soybean, providing tremendous emergence in tougher conditions. It performs best at moderate planting populations on productive ground where Sclerotinia white mold is not a concern. 12EB32 has proven itself to bush out and deliver high yields.

STINE® 12EE63 BRAND

Maturity	12
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

Stine 12EE63 brand features very good emergence and good standability. It boasts the Rps1c gene for Phytophthora root rot resistance and has good sudden death syndrome tolerance. 12EE63 is also SCN resistant and has strong Sclerotinia white mold tolerance. This salt excluder soybean has a medium plant height.

STINE® 13EG23 BRAND

Maturity	13
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

Stine 13EG23 brand is a medium-height, high-yielding soybean that is a great choice for wide-row, low-population management strategies. 13EG23 is a showy plant type that will bush out. It works well on heavy or marginal-type ground with a high-yield expectation. For best results, if wanting to plant early, apply a treatment if sudden death syndrome is a concern.

STINE® 13EH62 BRAND

Maturity	13
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c3a	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 13EH62 brand exhibits tremendous early-season vigor and performance across a wide range of testing locations. This line features a well-rounded disease package, including Rps1c3a Phytophthora root rot resistance and tolerance to iron deficiency chlorosis and Sclerotinia white mold. 13EH62 is an exceptional early group 1 soybean that provides a good combination of yield and defensive capabilities.

STINE® 14EE13 BRAND

Maturity	14
SCN Susceptible	Brown Stem Rot Resistant
Rps Gene 3a	Height Medium

Enlist E3 SOYBEANS

Stine 14EE13 brand is a non-SCN-resistant line that demonstrates high-yield potential in a wide range of environments. It performs well against Sclerotinia white mold and Phytophthora root rot with its 3a gene. This line acts a little later than a 14 maturity, so its movement to the south works well.

STINE® 15EE32 BRAND

Maturity	15
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 3a	Height Medium

Enlist E3 SOYBEANS

Stine 15EE32 brand is an offensive powerhouse with strong defensive performance against sudden death syndrome and good tolerance to iron deficiency chlorosis. It also has Rps3a Phytophthora root rot resistance to cover the most Phytophthora root rot races. 15EE32 has good standability, making it suitable for nearly any row spacing, and it should provide maximum performance on well-drained soils.

STINE® 15EH62 BRAND

Maturity	15
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k3a	Height Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

15EH62 brings superior iron deficiency chlorosis tolerance paired with consistent yield performance for soils with very high calcium carbonate that are poorly drained. It has the 1k with 3a Phytophthora root rot traits for defense against the rots and maintains its medium height even on poorly drained fields. Strong tolerance to sudden death syndrome, combined with good standability, promotes earlier planting windows to bring that much-needed yield to the rough acre 15EH62 is meant for.

STINE® 17EE32 BRAND

Maturity	17
SCN Resistant	Brown Stem Rot Heterozygous
Rps Gene 3a	Height Medium

Enlist E3 SOYBEANS

Stine 17EE32 brand has demonstrated yield and performance across multiple years. It performs best when planted in wide-row, lower-population environments. 17EE32 offers some protection against iron deficiency chlorosis and Sclerotinia white mold, provides good protection against sudden death syndrome, and features Rps3a Phytophthora root rot resistance.

STINE® 17EJ22 BRAND

Maturity	17
SCN Peking	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 17EJ22 brand is a unique line featuring Peking SCN resistance and consistent disease tolerance against sudden death syndrome, Sclerotinia white mold and iron deficiency chlorosis, along with very good standability and Rps1k Phytophthora root rot resistance. Plant 17EJ22 in narrow-row, high-population environments across soil types for continued success.

STINE® 18EJ32 BRAND

Maturity	18
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 18EJ32 brand is a highly versatile soybean built for high-productivity acres, just like its relative 28EH32. Rps1k Phytophthora root rot resistance and very good standability allow you to push 18EJ32 in narrow rows and higher populations, even in poorly drained soils. It has strong tolerance to sudden death syndrome and good tolerance to Sclerotinia white mold. For best results, keep 18EJ32 on heavier, less-calcareous soils.

NEW

STINE® 18EK32 BRAND

Maturity	18
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 3a	Height Medium

Enlist E3 SOYBEANS

Stine 18EK32 brand brings forward great genetic gain as the progeny of 15EE32. It is a standout with solid east-west movement across all soil types. 18EK32 has very good standability for narrow-row, high-yield environments. Its Rps3a gene and good tolerance to sudden death syndrome and Sclerotinia white mold enable early planting on poorly drained soils with little concern. 19EK02 is also its sister, showing its family success.

Patent Information at soybeangermplasmpatent.com.

STINE® 19EC12 *BRAND*

Maturity	19
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 19EC12 brand is an extremely versatile soybean with tremendous emergence. It is strong against sudden death syndrome, good against Sclerotinia white mold and features Rps1k Phytophthora root rot resistance. Many people call 19EC12 "Old Reliable" because it is a consistent performer across environments.

STINE® 19EJ13 *BRAND*

Maturity	19
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 19EJ13 brand is a high-yielding soybean line that provides strong sudden death syndrome tolerance in any row configuration and has the potential to get tall on heavier soils. It also has strong tolerance to Sclerotinia white mold and features Rps1c Phytophthora root rot resistance for protection on poorly drained soils.

NEW

STINE® 19EK02 *BRAND*

Maturity	19
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 3a	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

Stine 19EK02 brand brings forward family traits as the sister of 18EK32 and the progeny of 15EE32. 19EK02 is a shorter plant type that travels across soil types with very good standability paired with good tolerance to sudden death syndrome and Sclerotinia white mold, enabling early planting. 19EK02 also has the 3a gene like its sister, making it well suited for heavy, poorly drained clay soils. For best results, plant it on highly productive soils in narrow-row, high-population environments to get as many nodes as possible.

NEW

STINE® 19EK20 *BRAND*

Maturity	19
SCN Resistant	Brown Stem Rot –
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 19EK20 brand comes from a strong lineage of performers, including 30EH23, 32EJ92 and more. Plant it at higher planting populations within 15-inch row operations and rely on Stine genetics to bring yield. 19EK20 travels well across soil types with early planting success. For best results in poorly drained soils, apply fungicide seed treatments for protection against Phytophthora root rot.

STINE® 20EG02 *BRAND*

Maturity	20
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1a	Height Medium

Enlist E3 SOYBEANS

Stine 20EG02 brand is a medium-height, bushier plant type that displays outstanding plant health throughout the growing season. It shows exceptionally well and performs best in wide-row, lower-population environments to avoid lodging. 20EG02 has strong tolerance to sudden death syndrome and good tolerance to Sclerotinia white mold, even in heavy-pressure environments.

STINE® 20EH92 *BRAND*

Maturity	20
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 20EH92 brand is a high-yielding line with above-average oil content. It combines protection against sudden death syndrome with built-in resistance to brown stem rot. 20EH92 is a bushy plant type with very good standability and works well in lighter soils and rolling ground. For best results, consider a seed treatment if planting in heavy, poorly drained soils.

NEW

STINE® 21EK23 BRAND

Maturity	21
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 3a	Height Medium

Enlist E3 SOYBEANS

Stine 21EK23 brand brings forward the highest yield potential of the early 2 maturity at 110.6%. This semi-branching soybean performs well across soil types and maintains its height on marginal soils. 21EK23 excels in poorly drained soils with the 3a Phytophthora gene paired with good tolerance to sudden death syndrome and Sclerotinia white mold. This enables 21EK23 to be planted early in moderate populations for solid success.

STINE® 22EG02 BRAND

Maturity	21/22
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

Stine 22EG02 brand is one of the easiest-combining soybeans in the lineup. It has good season-long plant health and great lateral branch movement to close canopies quickly. When searching for a consistently high-yielding line that performs on well-drained, sandier soils, look to 22EG02 to deliver. For best results in high-yield environments, plant it in wide rows and let 22EG02 bush out and get as many branches, pods and nodes as possible.

NEW

STINE® 22EK02 BRAND

Maturity	22
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 22EK02 brand brings straight yield to the lineup at 108.6% of yield trend, with good tolerance and an attractive plant type. It performs well in moderate- to well-drained soils at moderate planting populations. 22EK02 is good against sudden death syndrome and Sclerotinia white mold, enabling early planting with less concern for late-season issues. If planting on poorly drained soils, make sure a seed treatment is applied for protection against Phytophthora root rot.

NEW

STINE® 22EK92 BRAND

Maturity	22
SCN Peking	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 22EK92 brand brings forward elite genetics paired with Peking SCN resistance. It is a medium-height soybean that responds well to higher populations and prefers highly productive, poorly drained soils. 22EK92 has good tolerance to sudden death syndrome and Sclerotinia white mold, enabling early planting and reaching top-end yields. Avoid placing it on soils with high pH or calcium carbonate.

STINE® 24EH32 BRAND

Maturity	24
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 24EH32 brand is the highest-yielding mid-group 2 soybean in Stine's Elite Yield Trials at 108.3% of yield trend. What brings interest in it is its high-yield potential, good sudden death syndrome protection and very good standability. These attributes make 24EH32 ideal for a high-producing, narrow-row, high-population environment. For best results, avoid planting it where iron deficiency chlorosis is a known issue and open the canopy if Sclerotinia white mold is a risk.

NEW

STINE® 24EK21 BRAND

Maturity	24
SCN Resistant	Brown Stem Rot Resistant
Rps Gene H3a	Height Medium

Enlist E3 SOYBEANS

Stine 24EK21 brand is a versatile soybean for tough, marginal-ground acres with late-season disease issues. It contains strong tolerance to sudden death syndrome and Sclerotinia white mold, enabling early planting and use in narrow-row, high-population strategies. 24EK21 belongs on variable ground with the H3a gene for poorly drained soils, medium plant height and a beautiful, bushy plant type. It also has STS tolerance, providing an additional option for herbicide application in fields with weed control issues.

STINE® 25EG02 BRAND

Maturity	25
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 25EG02 brand is built for all-out yield in highly productive environments and features STS tolerance. It performs well across hilltops and maintains its height throughout the season. Plant 25EG02 at moderate populations in any row association. For best results, avoid poorly drained soils that have exhibited Phytophthora root rot. If Sclerotinia white mold has been present historically, open the canopy. 25EG02 is also sensitive to metribuzin when trying to control weedy fields.

STINE® 25EG20 BRAND

Maturity	25
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c1k	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

Stine 25EG20 brand is a showy soybean with great top-end yield potential in high-yielding environments. It consistently performs well against sudden death syndrome, iron deficiency chlorosis and Phytophthora root rot with its 1c/1k double stack. For best results, plant 25EG20 at lower populations and off well-drained or marginal soils.

STINE® 25EJ92 BRAND

Maturity	25
SCN Peking	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 25EJ92 brand is built for yield on tough acres. It is a unique medium-height, streamlined soybean with Peking SCN resistance and good standability in 15-inch rows. 25EJ92 also features STS tolerance and good tolerance to Sclerotinia white mold, iron deficiency chlorosis and sudden death syndrome. If planting on poorly drained soils, consider a seed treatment to protect against rots. Plant 25EJ92 at moderate populations and let it bush out as much as possible to ensure easy combinability at harvest.

NEW

STINE® 26EK29 BRAND

Maturity	26
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 26EK29 brand is the direct descendant of 29EF02, which is still in the lineup, demonstrating the power of this lineage. It is also the sister to the 28EK20 line, which was brought forward for the same yield it possesses. 26EK29 is a medium- to moderately tall inline-style soybean that can travel across soil types. It is best placed on well-drained soils at moderate planting populations in any row width.

STINE® 27EG22 BRAND

Maturity	27
SCN Peking	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 27EG22 brand is built to perform across soil types and has done so consistently as a Peking line in the late group 2 maturity. It has strong tolerance to sudden death syndrome and carries the 1k Phytophthora root rot resistance gene, enabling planting in nearly any soil type. Plant 27EG22 at moderate to lower populations to encourage it to bush more and bring an even better-looking plant type to your farm.

STINE® 27EJ02 BRAND

Maturity	27
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 27EJ02 brand is a sister to 28EJ82, which demonstrates high-yield potential. Plant it in any row width at moderate to higher populations. Let 27EJ02 accumulate flowers early with its strong sudden death syndrome tolerance, good tolerance to Sclerotinia white mold and very good tolerance to Phytophthora root rot. Avoid planting it on high-pH soils that could promote iron deficiency chlorosis.

STINE® 28EJ82 BRAND

Maturity	27/28
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 28EJ82 brand comes from a strong lineage brought forward with extremely high yields. This 2.8-maturity soybean offers good standability and is suitable for narrow rows and higher populations. It thrives in the mid- to late planting window, with season-long plant health supporting high yields. If planting early, 28EJ82 responds well when paired with a seed treatment.

STINE® 28EH32 BRAND

Maturity	28
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 28EH32 brand is a solid choice as a defensive-style soybean with a good trait and tolerance balance. Planting it in narrow-row, high-population strategies is optimal across soil types. 28EH32 is a medium-statured line that exhibits very good standability, good performance against sudden death syndrome and Sclerotinia white mold, and STS tolerance. For best results, plant 28EH32 early.

NEW

STINE® 28EK20 BRAND

Maturity	28
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 28EK20 brand delivers the highest yield in the late 2 group at 110.3% of yield trend. It travels well across soil types and regions, making it even more versatile. 28EK20 can be planted in narrow- or wide-row strategies at moderate populations. Not many traits come with this line, but it yields, yields, yields. If planting in poorly drained soils, a seed treatment is recommended for protection against rots.

STINE® 29EF02 BRAND

Maturity	29
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 29EF02 brand is a sister to 25EG02 and a parent to many others, bringing strong lineage into the lineup and showing the system at work. 29EF02 is a highly adaptable, known offensive soybean with good performance against sudden death syndrome and STS tolerance. It prefers moderate- to well-drained soils and to avoid Sclerotinia white mold ground.

NEW

STINE® 29EK20 BRAND

Maturity	29
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Deriving from the legendary 28M32 conventional line, Stine 29EK20 brand comes forward with its high-yield trend of 109.8% and solid agronomic traits to support its success. Plant it in 20-inch or wider rows at moderate to low populations to encourage branching. 29EK20 excels on highly productive, moderate- to well-drained soils and can be planted early due to its ability to excel against sudden death syndrome and Sclerotinia white mold. If planting in poorly drained soils, a seed treatment is recommended.

STINE® 30EH23 BRAND

Maturity	30
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

Stine 30EH23 brand is a beautiful, showy plant that can develop lots of branches. This moderately short to medium-height plant type works best in all-out yield environments and features STS tolerance. A strong sudden death syndrome rating allows early planting, even in poorly drained soils, due to its 1k Phytophthora root rot resistance. If planting in soils prone to white mold, open the canopy to avoid pressure.

STINE® 30EH32 BRAND

Maturity	30/31
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 30EH32 brand is a medium- to moderately tall, aggressive, high-yielding soybean with very good standability. It moves south very well and performs across a wide range of row spacings. For best results, plant 30EH32 at higher populations to maximize yield potential, though it can also be a great option for marginal ground. 30EH32 works great on sandy, well-drained soils with limited white mold potential.

STINE® 31EF02 BRAND

Maturity	31
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 31EF02 brand is a bushy-type soybean that maintains its performance potential in both highly productive and marginal ground. It offers tolerance to sudden death syndrome, Sclerotinia white mold and iron deficiency chlorosis, allowing for earlier planting. For best results, when planting early on productive ground, a seed treatment is recommended for additional protection against Phytophthora root rot.

STINE® 31EJ82 BRAND

Maturity	31
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 31EJ82 brand is bringing extremely high yields to the lineup, averaging 110% of yield trend in Stine's Elite Yield Trials. It has good standability across soil types and consistent performance against sudden death syndrome. For best results, consider a seed treatment to protect against rots if planting 31EJ82 in poorly drained soils.

STINE® 32EJ12 BRAND

Maturity	32
SCN Peking	Brown Stem Rot Resistant
Rps Gene 3a	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 32EJ12 brand is a transgressive-segregate, Peking SCN-resistant soybean and a sister to 34EH29. A very unique line with defensive strengths, averaging 109% of yield trend, 32EJ12 features Rps3a Phytophthora root rot resistance, along with tolerance to iron deficiency chlorosis and sudden death syndrome. It has good standability across soil types and works well in marginal ground and hilltops, maintaining its height.

STINE® 32EJ92 BRAND

Maturity	32
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 32EJ92 brand is an STS-tolerant line that features Rps1k Phytophthora root rot resistance for planting in poorly drained soils and delivers good, consistent yield performance. It also offers tolerance to iron deficiency chlorosis, sudden death syndrome and Sclerotinia white mold. These characteristics, along with its strong lineage to Stine 30EH23 and 36EH29, make 32EJ92 a very desirable option.

STINE® 33EJ29 BRAND

Maturity	33
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

Stine 33EJ29 brand has yielded consistently for multiple years in Stine's Elite Yield Trials. It tends to canopy quickly for those who have weed problems and brings a unique look with significant branching. For best results, plant 33EJ29 in wider rows (20 inches or wider) on moderate- to poorly drained soils. This line boasts good sudden death syndrome tolerance, STS herbicide tolerance and Rps1c Phytophthora root rot resistance for poorly drained soils.

STINE® 34EH29 BRAND

Maturity	34/35
SCN Peking	Brown Stem Rot Resistant
Rps Gene 3a	Height Moderately Tall

Enlist E3 SOYBEANS

Stine 34EH29 brand is a moderately tall plant type with good standability, Peking SCN resistance and consistent performance for wide adaptability across environments. It is a versatile line that needs to be combined early, when plants are at 14% moisture. 34EH29 offers good tolerance to sudden death syndrome and performs well in marginal soils where other varieties can shorten up. Be aggressive with this soybean, and it will provide the benefits you are after.

NEW STINE® 35EK92 BRAND

Maturity	35
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1a	Height Medium

Enlist E3 SOYBEANS

Stine 35EK92 brand brings a unique set of traits in the mid-group 3 maturity. This medium-stature, moderately branching line features root knot nematode resistance and is a salt excluder. These traits make 35EK92 ideal for rough, marginal ground with poorly drained soils and moderate to low planting populations. It has strong tolerance to sudden death syndrome and Sclerotinia white mold, making it a great early-plant option with good health throughout the year.

STINE® 36EH29 BRAND

Maturity	36
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 36EH29 brand, through multiyear, multilocation data, has proven itself thanks to strong sudden death syndrome tolerance, Rps1k Phytophthora root rot resistance and good standability. This attractive, branching plant type raises the bar on reliability and yield in this maturity range. 36EH29 also has STS tolerance, providing additional herbicide options to combat aggressive weed pressure. Plant it in moderate- to wide-row strategies, and 36EH29 will bush out and yield for anyone who wants to pick it.

STINE® 36EH32 BRAND

Maturity	36
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

Stine 36EH32 brand is one to watch in this maturity. It continues to set the standard for yield performance among mid-group 3 soybeans. 36EH32 is a sister to 37GE23 and 38EG32, which are both related to the famous 28M32 conventional line, giving it very high-yield potential. 36EH32 has strong tolerance to sudden death syndrome and Sclerotinia white mold, allowing for early planting in limited conditions. Plant it in narrow-row, high-population environments across soil types and see what this lineage can do for you.

NEW STINE® 36EK32 BRAND

Maturity	36
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

A known progeny of the legendary 36EE12, Stine 36EK32 brand is a well-rounded soybean that is highly versatile across soil types and regions. It should be planted in narrow-row, high-population environments and can be placed in poorly drained soils thanks to its 1k Phytophthora gene. 36EK32 has brown stem rot resistance, strong tolerance to sudden death syndrome and STS tolerance, making it a solid candidate for early planting.

STINE® 37EG23 BRAND

Maturity	37
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Moderately Tall

Enlist E3 SOYBEANS

Stine 37EG23 brand is a moderately tall, bushy soybean with good eye appeal. It yields well while offering protection on high-pH soils and poorly drained soils with Rps1k Phytophthora root rot resistance. For best results, plant 37EG23 in 20-inch or wider row associations across soil types. When planting early, a seed treatment is recommended for additional protection against sudden death syndrome.

STINE® 37EJ20 BRAND

Maturity	37
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene s	Height Medium

Enlist E3 SOYBEANS

Stine 37EJ20 brand is an STS-tolerant line with very good standability, making it perfect for narrow-row, high-population environments. It travels well across hilltops and in areas where plants can get short. 37EJ20 has good sudden death syndrome tolerance, but if planting in poorly drained, marginal soils, consider a seed treatment to protect against rots.

STINE® 38EG32 BRAND

Maturity	38
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 38EG32 brand performs well on heavier soils when planted at higher populations, and its lateral branching allows it to express its full yield potential. Branching, coupled with very good standability, translates into top-end yield potential at harvest. 38EG32 has good height, providing versatility across soil types, and has proven to be a good double-crop soybean option.

STINE® 38EH02 BRAND

Maturity	38
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene s	Height Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

Stine 38EH02 brand is a medium-height soybean that performs well on marginal ground, at lower populations and in wider rows. This line branches out with good vertical stature and fills in a good canopy to bring tremendous yield while reducing weed pressure. 38EH02 has good sudden death syndrome tolerance and prefers moderate- to well-drained soils to avoid Phytophthora root rot potential early in the season. If planting in poorly drained soils, a seed treatment is recommended.

STINE® 38EJ29 BRAND

Maturity	38
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1a	Height Medium

Enlist E3 SOYBEANS

Stine 38EJ29 brand offers great eye appeal with dark green color throughout the year, good canopy coverage to shade rows quickly and great defensive traits to promote versatility within a grower's operation. Along with good plant health, it provides unique root knot nematode resistance capabilities. 38EJ29 also has elite standability and combinability at harvest. For best results, consider a seed treatment if planting early or in poorly drained soils.

NEW

STINE® 38EK02 BRAND

Maturity	38
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1a	Height Medium

Enlist E3 SOYBEANS

Stine 38EK02 brand brings staggering performance with a combination of yield and traits to the Stine lineup. It is a medium-height, moderately bushy plant type with frogeye leaf spot resistance and salt excluder performance. This line performs well on any soil type in 20-inch or wider row strategies, providing good standability and combinability. 38EK02 also has strong tolerance to sudden death syndrome for early planting and carries the 1a Phytophthora root rot gene to thrive in poorly drained soils.

NEW

STINE® 38EK29 BRAND

Maturity	38
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene s	Height Medium

Enlist E3 SOYBEANS

Stine 38EK29 brand is a sister to 37EJ20, providing stable, consistent performance across soil types while maintaining its height under stress. 38EK29 can be planted in narrow-row, high-population environments and still offer very good standability. Its STS tolerance also supports effective weed control and good canopy coverage. Plant 38EK29 in moderate- to well-drained soils to avoid Phytophthora root rot potential.

STINE® 39EH23 BRAND

Maturity	39
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 39EH23 brand is related to both 38EG23 and 38EG32, sharing their background of good yield potential paired with protection against sudden death syndrome and Rps1k Phytophthora root rot resistance. 39EH23 is a medium-height, bushy plant type with excellent plant health throughout the season. Plant it in 20-inch or wider row strategies and watch this soybean travel across soil types while maintaining its height.

STINE® 40EH92 BRAND

Maturity	40
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Moderately Short

Enlist E3 SOYBEANS

Stine 40EH92 brand is a favorite among many Stine independent sales reps. It brings a moderately short, salt excluder soybean to the market with great canopy abilities. This line offers high-yield potential and features STS tolerance. 40EH92 is also a great option for double-crop operations, as its shorter stature allows it to canopy quickly. If planting in poorly drained soils, a seed treatment for Phytophthora root rot is recommended.

STINE® 42EJ12 BRAND

Maturity	41/42
SCN Resistant	Brown Stem Rot Heterozygous
Rps Gene 1k	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

Stine 42EJ12 brand is a showy, bushy plant with distinct characteristics. It is a salt excluder line with STS herbicide tolerance, Rps1k Phytophthora root rot resistance for poorly drained soils and strong sudden death syndrome tolerance for early planting. 42EJ12 responds to fungicide and performs well on any soil type in narrow rows at higher populations. It has also excelled in river-bottom ground and irrigated fields, adding to its versatility.

STINE® 42EJ20 BRAND

Maturity	42
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 42EJ20 brand is the complete agronomic package with impressive yield potential. It has demonstrated elite performance against charcoal rot, frogeye leaf spot, target spot and sudden death syndrome, and it works well in heavy soils along the Interstate 70 and Interstate 64 corridor. With very good emergence and season-long plant health, 42EJ20 is a must-have in this maturity range.

STINE® 43EG29 BRAND

Maturity	43
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

Stine 43EG29 brand delivers yield, standability and sudden death syndrome protection. It has consistently shown some of the highest yield potential among all lines in the early group 4 lineup. 43EG29 is a great double-crop option for those looking for versatility. For best results, plant it in wider rows, allow the crop to bush out, and watch it make a whole bunch of lateral branches and pods to drive yield. 43EG29 is also STS tolerant.

STINE® 43EJ23 BRAND

Maturity	43
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

Stine 43EJ23 brand is built for yield performance and versatility. It is a medium-height plant with great harvestability that can stretch taller in productive ground. Plant 43EJ23 in 20-inch or wider row strategies at moderate populations to promote easy combining. It is a great option for high-productivity, heavier soils thanks to Rps1k Phytophthora root rot resistance and strong sudden death syndrome tolerance.

PERFECTING THE
DISCIPLINE OF YIELD.
STINE HAS YIELD
LIVE YOUR LIFE YOUR WAY

NEW

STINE® 43EK20 BRAND

Maturity	43
SCN Resistant	Brown Stem Rot –
Rps Gene H1a	Height Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

Stine 43EK20 brand brings a unique set of traits, much like its sister 38EJ29. It delivers consistent yield with root knot nematode resistance, frogeye leaf spot resistance and the novelty of being a salt excluder in the industry. Plant 43EK20 at moderate to low populations in 20-inch or wider row associations for good standability. It is also strong against sudden death syndrome to promote early planting and season-long plant health.

NEW

STINE® 43EK92 BRAND

Maturity	43
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 43EK92 brand has been dubbed a big, strong variety and is recognized for performing in tough soils. It has good, solid tolerance and performance across tough acres. Good frogeye leaf spot tolerance, high pH and salt excluder characteristics make this line desirable in Kansas, the Mid-South and the far East. Plant 43EK92 in any row association on moderate- to well-drained soils for excellent performance. If planting on poorly drained soils, consider a seed treatment for extra protection.

STINE® 44EH23 BRAND

Maturity	44
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

Stine 44EH23 brand is a sister of 47EH20, which is one of the highest-yielding lines in the group 4 pipeline. From that lineage, 44EH23 inherits high yield and proven field tolerance to iron deficiency chlorosis, sudden death syndrome and Phytophthora root rot, creating a soybean that everyone in the mid-group 4 maturity should consider. Plant 44EH23 at moderate populations across marginal and productive soil types for best results.

NEW

STINE® 44EK12 BRAND

Maturity	44
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

Stine 44EK12 brand offers a solid pairing of yield and tolerances, making it a broadly adaptive line in the 4.4 maturity. Yield on productive and marginal ground has been proven with 106.6% of yield trend in Stine's Elite Yield Trials, and 44EK12 shows good tolerance to sudden death syndrome, stem canker and frogeye leaf spot. It also has the critical salt excluder gene, enabling planting in high-pH soils. For best results, plant it at moderate populations in 20-inch or wider row strategies.

STINE® 46EG92 BRAND

Maturity	46
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

Stine 46EG92 brand is an attractive plant type that really bushes out great to cover wide-row platforms. It features STS tolerance, enabling multiple herbicide options. 46EG92 brings traits and yield performance to the lineup, averaging 106.3% of yield trend. Plant this line in wide-row, lower-population environments on productive soil types to get the most out of it.

NEW

STINE® 46EK29 BRAND

Maturity	46
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 46EK29 brand is a salt excluder soybean with STS herbicide tolerance, making it an excellent choice for the Arkansas rice regions and Kansas. It has good height with branching to reduce weed pressure and good late-season health with standability for easy combining at harvest. 46EK29 is well traveled and broadly adaptive along the East Coast and South, showing its lineage as a relative of 43EG29.

Patent Information at soybeangermplasmpatent.com.

STINE® 47EE02 BRAND

Maturity	47
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 47EE02 brand continues to show its superior genetics with consistent yield performance and multiple trait and tolerance capabilities. It is a salt excluder soybean suited for tough, high-salt soils and packs a yield punch. 47EE02 performs well in double-crop systems and on gumbo soils. Plant this line in any row association across moderate- to well-drained soils.

STINE® 47EH20 BRAND

Maturity	47
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 47EH20 brand is a moderate-branching, medium-height, STS-enabled soybean. It has proven to be a consistent high-yielder for three consecutive years, outperforming all competitors. This yield potential, coupled with very good standability and demonstrated field tolerances, makes 47EH20 one to watch in the late group 4 maturity.

STINE® 48EJ21 BRAND

Maturity	48
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 48EJ21 brand has demonstrated tremendous performance on tough ground and thrives at lower planting populations. This heavy-clay-soil soybean brings a salt excluder to the market with strong sudden death syndrome protection. It is also excellent against target spot and moderately tolerant to charcoal rot.

NEW

STINE® 48EK29 BRAND

Maturity	48
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

Consistency is the word for Stine 48EK29 brand. In both appearance and yield performance, 48EK29 delivers reliably. Excellent frogeye leaf spot tolerance, good sudden death syndrome and iron deficiency chlorosis tolerance, and STS tolerance make 48EK29 desirable across the Mid- and Far South soybean-growing regions. This line maintains its height and performance across heavy soil types and promotes good standability at moderate planting populations in any row configuration.

NEW

STINE® 48EK32 BRAND

Maturity	48
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Enlist E3 SOYBEANS

Stine 48EK32 brand's performance at 107.1% of yield trend in Stine's Elite Trials shows what it can deliver. Its attractive light tawny and brown appearance, paired with good standability, enables easy combining and supports good season-long plant health. 48EK32 has frogeye leaf spot and target spot tolerance, along with good tolerance to sudden death syndrome and iron chlorosis deficiency for early planting in any soil type. Plant 48EK32 in moderate populations across soil types, and all growers will be happy.

STINE® 49EE21 BRAND

Maturity	49
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium/ Moderately Tall

Enlist E3 SOYBEANS

Stine 49EE21 brand is a top-performing, defensive-style bean that is especially useful against root knot nematode. Its consistently high yield, good tolerance to sudden death syndrome and root knot nematode traits are rare. 49EE21 is medium to moderately tall in height and an impressive soybean with great eye appeal.

STINE® 49EH23 *BRAND*

Maturity	49
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Stine 49EH23 brand is another high-performing salt excluder in the late group 4 maturity. A medium-height plant type with tolerance to iron deficiency chlorosis and sudden death syndrome, it performs well in wider row spacings and lower planting populations, and Rps1c Phytophthora root rot resistance helps in poorly drained soils.

NEW STINE® 49EK39 *BRAND*

Maturity	49
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene H1k	Height Medium

Stine 49EK39 brand is a broadly adaptive soybean that can fit any grower's management strategy. It has good standability for planting at moderate populations in any row spacing, with STS and stem canker tolerance for season-long plant health. This moderately bushy plant type covers rows well and maintains solid appearance across all soil types, making 49EK39 a desirable choice.

STINE® 50EG20 *BRAND*

Maturity	50
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

EXCLUSIVE LINE FOR 2027

Stine 50EG20 brand is a medium-height soybean with a showy, bushy plant type that delivers powerful yields in wide rows. It performs well on marginal ground as well as in high-yield environments. For best results, plant 50EG20 in well-drained soils; if that is not an option, a seed treatment for fungal diseases is recommended.

STINE® 50EG32 *BRAND*

Maturity	50
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

EXCLUSIVE LINE FOR 2027

Stine 50EG32 brand is a medium-height soybean with good vertical branching for increased sunlight interception. It performs well in river bottoms, irrigation and narrow-row applications to enable growth. 50EG32 can handle tougher soils, but it truly shines in high-yield environments with wider rows.

STINE® 51EG23 *BRAND*

Maturity	51
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

Stine 51EG23 brand is the highest-yielding early group 5 soybeans on the market, with 106.3% of yield trend. It emerges quickly and initiates lateral branching to cover rows rapidly, helping reduce weed pressure. 51EG23 performs well in a wide range of environments and row spacings. For best results, avoid planting in areas where iron deficiency is a concern.

STINE® 52EG09 *BRAND*

Maturity	51
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Stine 52EG09 brand is a proven performer, especially on acres where root knot nematode is a concern. It is a great choice for wider rows and moderate- to well-drained soils. For best results, consider a seed treatment for Phytophthora root rot if planting on poorly drained soils.

Enlist E3 SOYBEANS

Nemasphere™
Nematode Resistance Trait

Coming in
2028*

Introducing the Only Soybean Trait System that Helps Drive Yield From All Angles

The Enlist E3® Trait and Nemasphere™ Nematode Resistance Trait

When you need a soybean trait system that fights the #1 yield robber while giving superior weed control, look no further than the Enlist E3® trait, jointly developed and owned by Corteva and M.S. Technologies, stacked with Nemasphere™ nematode resistance trait.* The system will deliver a generational breakthrough in soybean cyst nematode (SCN) management and tolerance to four industry-leading herbicide MOAs, providing tolerance to 2, 4-D choline, glyphosate, glufosinate and mesotrione.

Advanced SCN Control Below the Soil

Nemasphere nematode resistance trait is the first and only biotech trait for SCN, unlocking a breakthrough novel MOA that's proven effective against SCN.

Industry-Leading Weed Control Above the Soil

The trait system will bring broad-spectrum weed control and lasting residual activity exactly where it matters most, delivering tolerance to four industry-leading MOAs, including mesotrione tolerance.

Untapped Yield Potential

The Enlist E3 trait stacked with Nemasphere nematode resistance trait will be integrated with elite genetics to unlock the full agronomic potential of top-performing varieties.

Scan to Learn More

*Available pending regulatory approvals for 2028.

The Nemasphere™ trait technology with Mesotrione tolerance is owned and developed by BASF. Nemasphere is a trademark of BASF.

The transgenic soybean event in Enlist E3® soybeans is jointly developed and owned by Corteva Agriscience and M.S. Technologies, L.L.C. BASF licensed its Nemasphere™ resistance soybean trait to Corteva and M.S. Technologies, L.L.C. for use in Enlist E3® soybeans. ™ ® ℠ Trademarks and service marks of Corteva Agriscience and its affiliated companies.

STINE® 52EG99 BRAND

Maturity	51
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

Enlist E3 SOYBEANS

Stine 52EG99 brand provides consistent yield performance coupled with root knot nematode resistance. It is a medium-height, semi-branching plant type that performs best in wider rows at lower populations. For best results, consider a seed treatment for fungal rots if planting on poorly drained soils to reduce stem and root rot risk.

STINE® 55EG20 BRAND

Maturity	55
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Moderately Tall

Enlist E3 SOYBEANS

Stine 55EG20 brand is a solid performer in the mid-group 5 maturity, with a yield trend of 108.6%. This moderately tall, showy plant type is consistent and reliable across difficult soils and row spacings. 55EG20 has shown its dynamic potential in the South over multiple years.

STINE® 60EE21 BRAND

Maturity	60
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Moderately Short/ Medium

Enlist E3 SOYBEANS

EXCLUSIVE LINE FOR 2027

A moderately short to medium plant type, Stine 60EE21 brand has a strong lineage that provides consistent yield performance at 110.3% of yield trend across the heavy ground in the South. It maintains height in heavy soils and has top-level tolerance to Phytophthora root rot. 60EE21 is a salt excluder that provides quality performance in high-salt-prone ground. It also has STS tolerance, giving more options for herbicide applications.

STINE® 77EA40 BRAND

Maturity	77
SCN Susceptible	Brown Stem Rot Heterozygous
Rps Gene 1c3a	Height Medium

Enlist E3 SOYBEANS

Initially bred and developed for the South American market, Stine 77EA40 brand combines eye appeal and high-yield performance for the unique environment served by this group 7 soybean. It is resistant to frogeye leaf spot, making it a great option in the South.

XTENDFLEX® SOYBEANS

Stine 06FH32 brand brings forward the consistency customers rely on. It has very good standability across soil types and row associations, making this soybean versatile. In the data, 06FH32 shows 109% performance in low-yield environments while maintaining 104% in high-yield soils. It features good tolerance to sudden death syndrome and Sclerotinia white mold, pairing early planting capability with 1c Phytophthora traits for reliability in slow-emergence conditions.

NEW STINE® 08FH23 BRAND

Maturity	08
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c	Height Medium

XTENDFLEX® SOYBEANS

Stine 08FH23 brand is a sister to 06FH32, which shows its reliability and consistency across soil types. 08FH23 performs well across South Dakota and Minnesota in both high- and low-yield environments. It offers good, consistent performance against Sclerotinia white mold paired with brown stem rot resistance for later in the season. Plant 08FH23 at moderate planting populations in 20-inch or wider row strategies. This soybean will bring consistency much like its sister.

STINE® 20FG23 BRAND

Maturity	20
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1k	Height Medium

XTENDFLEX® SOYBEANS

Stine 20FG23 brand is a medium-sized, bushy soybean that delivers consistent performance across a wide range of geographies, with very good yield potential at 105.5% of yield trend. Very good standability, paired with Rps1k Phytophthora root rot resistance and good Sclerotinia white mold and sudden death syndrome tolerance, enables early planting with high-yield expectations across moderate- to poorly drained soils.

STINE® 28FG32 BRAND

Maturity	28
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c3a	Height Moderately Short/ Medium

XTENDFLEX SOYBEANS

Stine 28FG32 brand is the perfect choice for high-yield environments. It features a unique, compact XtendFlex plant type, which offers great standability and enables its top-end high-yield potential. 28FG32 has strong protection against sudden death syndrome and Rps1c3a Phytophthora root rot resistance. For best results, avoid placing it in poorly drained, highly calcium carbonated soils.

STINE® 45FF92 BRAND

Maturity	44/45
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

XTENDFLEX SOYBEANS

Stine 45FF92 brand performs well in challenging environments. It is a premier salt excluder, STS-tolerant line with a medium-height, bushy-style plant type. 45FF92 also provides root knot nematode resistance and good frogeye tolerance for the south and east geographies. If sudden death syndrome is possible, apply a seed treatment.

NEW

STINE® 45FH23 BRAND

Maturity	45
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c	Height Medium

XTENDFLEX SOYBEANS

Stine 45FH23 brand brings forward beautiful plant types with solid agronomics. It can be planted at moderate to high planting populations in moderate- to poorly drained soils due to its Phytophthora root rot traits. 45FH23 has great combinability paired with brown stem rot resistance for additional coverage in late-season health.

STINE® 47FF02 BRAND

Maturity	47
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

XTENDFLEX SOYBEANS

Stine 47FF02 brand features a bushy, medium-height plant type that is ideally suited for narrow-row, high-population strategies. It delivers consistent standability and performance across loam and clay soils; however, avoid early planting and high-pH soils, as 47FF02 is average against iron deficiency chlorosis and sudden death syndrome.

NEW

STINE® 47FH32 BRAND

Maturity	47
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c	Height Medium

XTENDFLEX SOYBEANS

Stine 47FH32 is closely related to 45FH23, combining a nice plant type with consistent agronomics across soil types. 47FH32 is best suited for moderate- to high-population strategies on marginal to poorly drained soil types. It features the 1c Phytophthora gene, brown stem resistance and STS tolerance. Although it has mixed flower color, that doesn't stop this soybean from being an elite yielder.

NEW

STINE® 49FH92 BRAND

Maturity	48/49
SCN Resistant	Brown Stem Rot Resistant
Rps Gene 1c	Height Medium

XTENDFLEX SOYBEANS

Stine 49FH92 brand promotes versatility with added components on top of its closely related soybean 47FF02. 49FH92 offers salt excluder characteristics, brown stem rot resistance and STS tolerance, making it travel across numerous operational types in the South. Plant 49FH92 in moderate planting populations across moderate- to poorly drained soils for ideal performance while enjoying its nice semi-branching plant type.

Patent Information at soybeangermplasmpatent.com.

STINE®
49FF20 *BRAND*

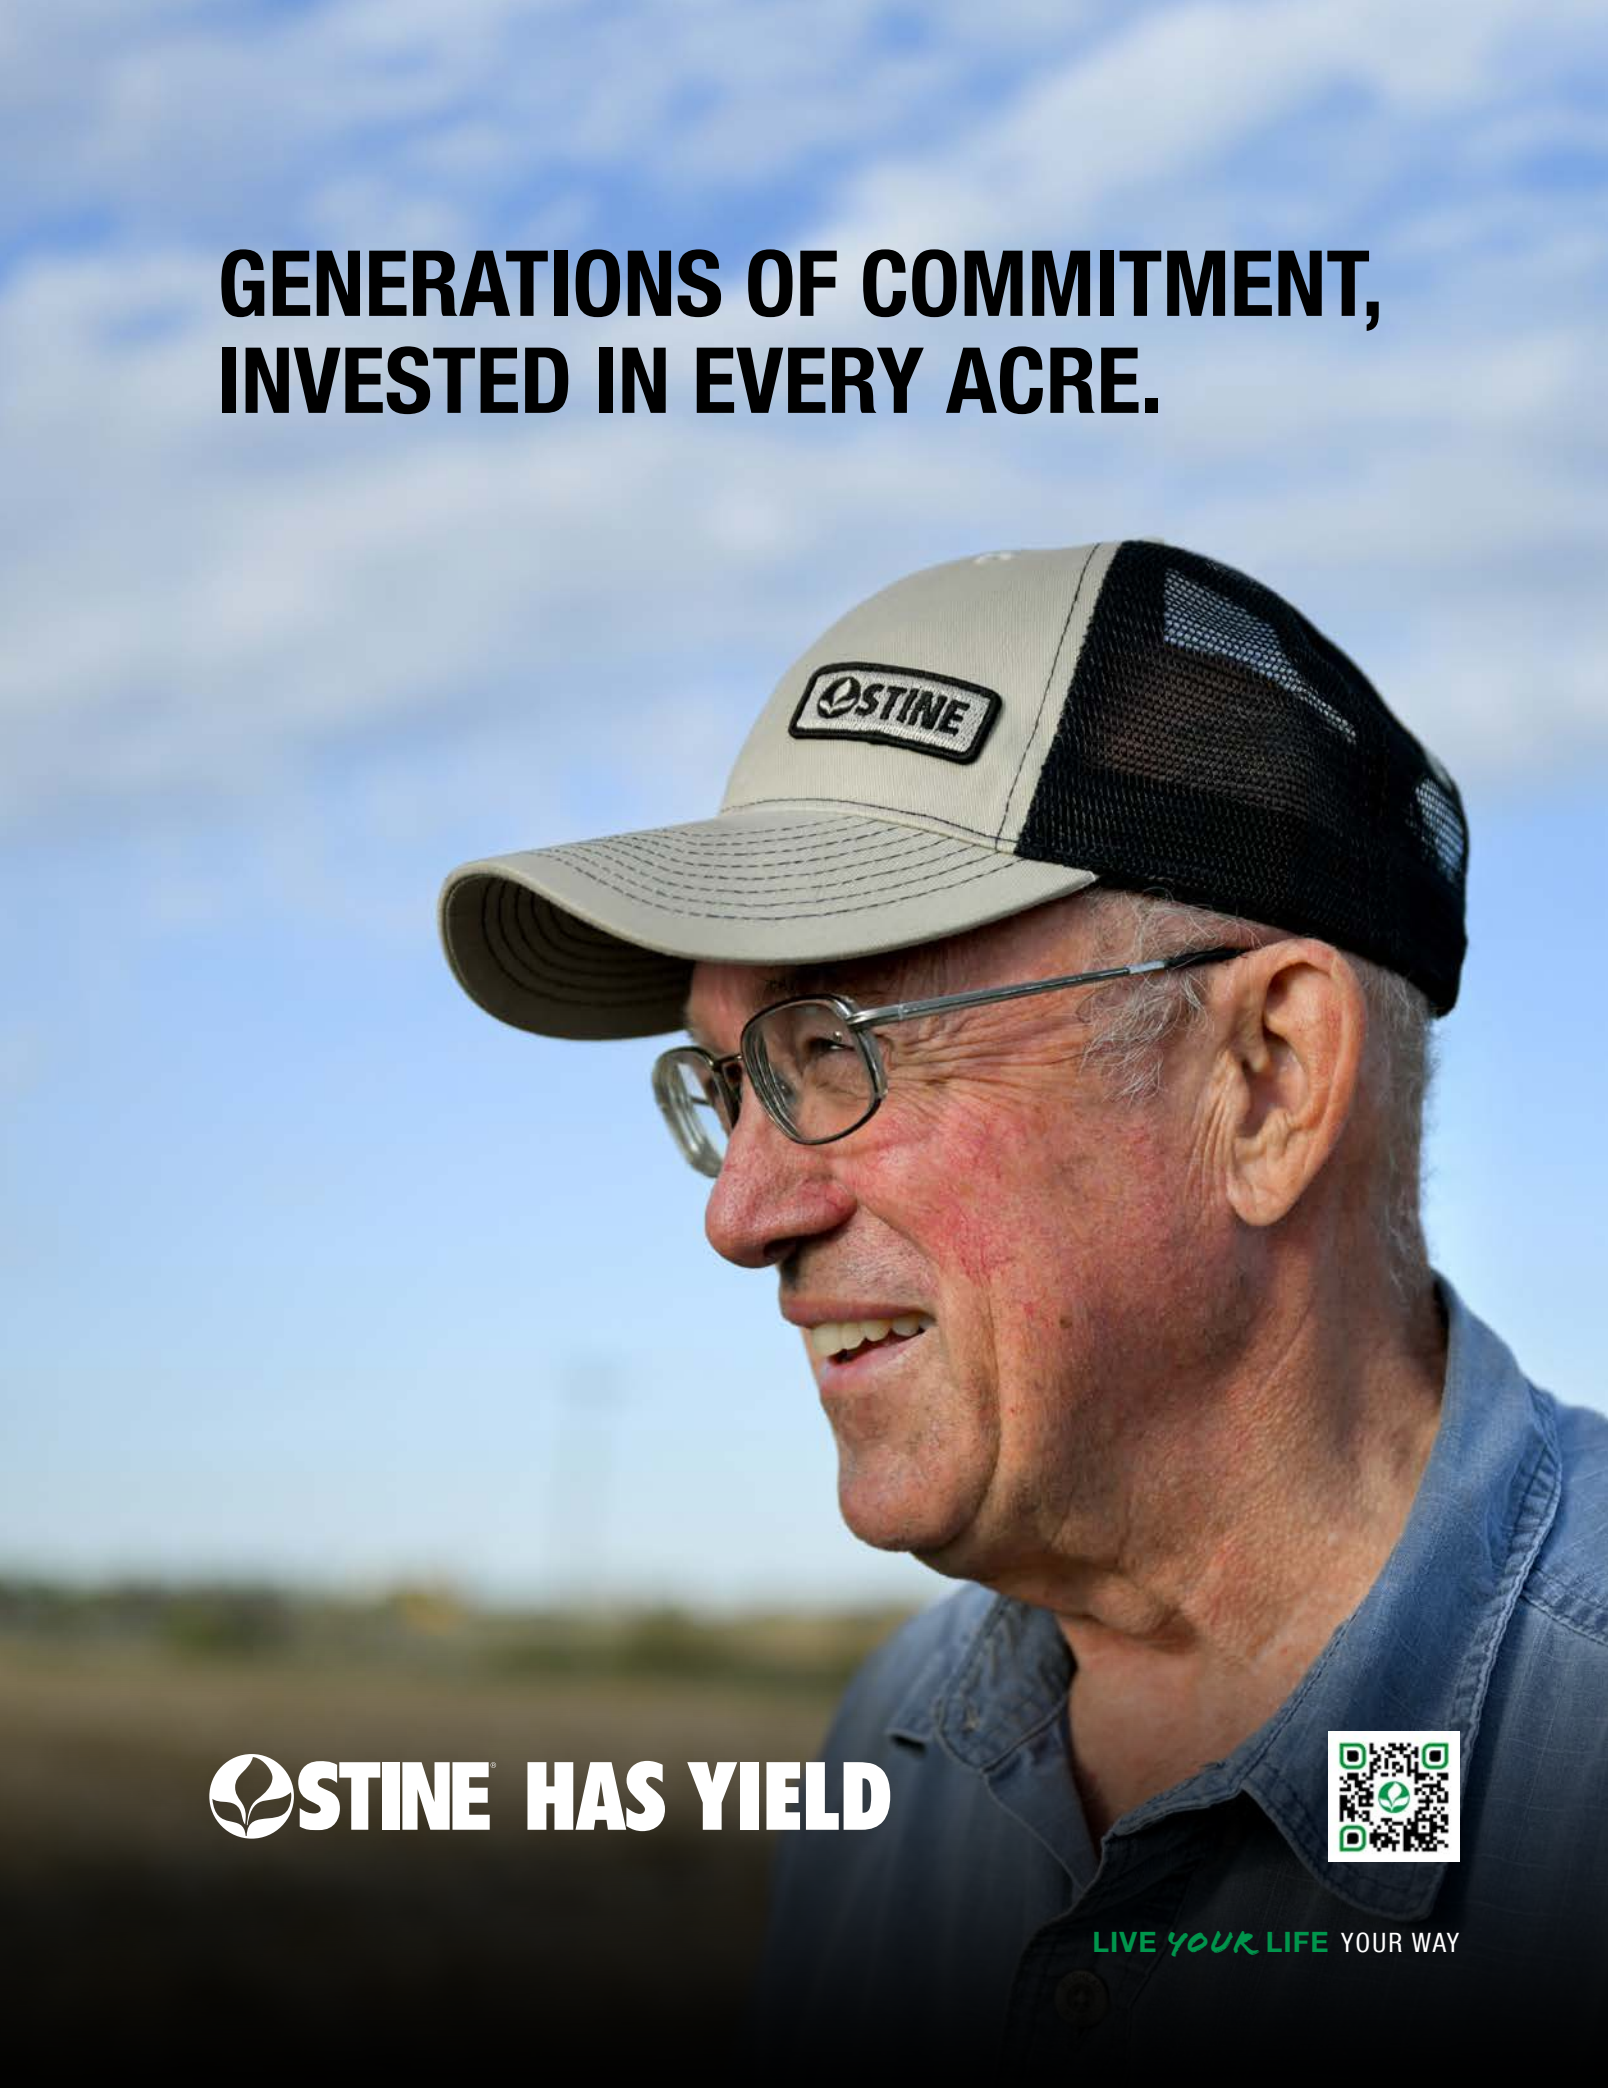

Maturity	*49/50*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene S	*Height Moderately Short/ Medium*

XTENDFLEX SOYBEANS

Stine 49FF20 brand brings a different look in this maturity with a medium- to moderately short plant. It performs very well on high-pH soils in the South and has good tolerance to sudden death syndrome. 49FF20 is a salt excluder line, making it a good choice for high-salt environments, which shows its versatility. It also features good frogeye tolerance and improved combinability in moderate- to wide-row operations.

GENERATIONS OF COMMITMENT, INVESTED IN EVERY ACRE.

STINE® HAS YIELD

LIVE *YOUR* LIFE YOUR WAY

STINE®
ELITE CONVENTIONAL
SOYBEAN LINEUP

Yield comes first! Stine's innovative soybean breeding program advances only the best-performing conventional genetics, which have earned the name "Elite" for good reason.

PREMIUM GENETICS ELITE SOYBEANS

STINE® 12S26 *BRAND*

Maturity	*12*
SCN Resistant	*Brown Stem Rot Susceptible*
Rps Gene 3a	*Height Medium*

PREMIUM GENETICS ELITE SOYBEANS

Stine 12S26 brand is a medium-height, attractive, bushy soybean with good standability across diverse operations. It boasts the best iron deficiency chlorosis rating in our lineup and strong Rps3a Phytophthora root rot resistance. 12S26 offers tremendous yield potential and solid agronomics, including good sudden death syndrome tolerance, making it versatile.

STINE® 16S29 *BRAND*

Maturity	*16/17*
SCN Peking	*Brown Stem Rot Resistant*
Rps Gene 3a	*Height Medium*

PREMIUM GENETICS ELITE SOYBEANS

Stine 16S29 brand has demonstrated truly elite performance across a wide range of soil types and geographies, averaging 107.4% of yield trend in Stine's Elite Yield Trials. This line is a medium-height Peking soybean that travels well across soil types with its Rps3a Phytophthora root rot resistance, making it a good choice for poorly drained soils. It also delivers solid standability for easy combining in the fall and good late-season disease tolerance.

STINE® 19P02 *BRAND*

Maturity	*18/19*
SCN Resistant	*Brown Stem Rot Resistant*
Rps Gene 1c	*Height Medium*

PREMIUM GENETICS ELITE SOYBEANS

Stine 19P02 brand is a medium-statured soybean with a bushy-style plant structure that produces a lot of branches, nodes and pods, making it suitable for wider row spacings and reduced populations. This line is adaptable north to south across moderate- to poorly drained soils. Plant 19P02 in moderate to low planting populations earlier in the season for best results.

Patent Information at soybeangermplasmpatent.com.

STINE® 20P22 BRAND

Maturity	19/20
SCN Peking	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 20P22 brand is a Peking SCN-resistant soybean with significant high-yield potential. It performs extremely well in higher-population, narrow-row platforms on highly productive ground, yet it works equally well in wider rows as it branches out beautifully. 20P22 emerges well and has good tolerance to iron deficiency chlorosis. For best results, consider using a seed treatment for fungal diseases if planting on poorly drained soils.

STINE® 22R32 BRAND

Maturity	22
SCN Peking	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium/ Moderately Tall

PREMIUM GENETICS ELITE SOYBEANS

Stine 22R32 brand is a Peking SCN-resistant soybean that delivers consistent, reliable performance across a range of environments. It has good standability in moderate to low planting populations thanks to its ability to branch out very nicely in variable soils. This line provides good defense against iron deficiency chlorosis, sudden death syndrome and Sclerotinia white mold. If you want an all-in-one soybean that can do it all, look at 22R32!

STINE® 25R23 BRAND

Maturity	25
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 25R23 brand performs consistently in heavy, poorly drained soils, in part thanks to Rps1c Phytophthora root rot resistance, but it also thrives on highly productive ground. 25R23 is a good choice for narrower rows and increased populations, and it offers tolerance to iron deficiency chlorosis.

STINE® 26R32 BRAND

Maturity	26
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 26R32 brand has high stability from west to east and maintains performance even in fields impacted by sudden death syndrome and Sclerotinia white mold. It performs especially well on higher-management acres. For best results, plant 26R32 in moderate to low planting populations and use caution when iron deficiency chlorosis is a concern.

NEW

STINE® 26T02 BRAND

Maturity	26
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene S	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 26T02 brand brings forward a slender, branching soybean that wants space to branch out. It responds well to seed treatments in highly productive, moderate- to well-drained soils. Plant 26T02 at moderate to low planting populations to encourage branching and avoid high-pH soils. This line has STS tolerance, which promotes additional herbicide options to combat weeds if present.

STINE® 28M32 BRAND

Maturity	28
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 28M32 brand is the most consistent, well-rounded conventional soybean in Stine's lineup. It adapts to nearly any farming strategy but performs especially well in moderate-population, narrow-row environments. Strong ratings against sudden death syndrome allow for early planting, and Rps1c Phytophthora root rot resistance provides additional protection on poorly drained soils.

Patent Information at soybeangermplasmpatent.com.

STINE® 29P02 BRAND

Maturity	29
SCN Resistant	Brown Stem Rot Resistant
Rps Gene S	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 29P02 brand has consistently charted above 100% of trial average in all three years it was tested in Stine's Elite Yield Trials. It has a nice defensive package, with good tolerance to iron deficiency chlorosis, sudden death syndrome and Sclerotinia white mold, as well as resistance to brown stem rot. Combining defense with yield, 29P02 delivers ease of harvest thanks to good standability and plant structure.

STINE® 31S32 BRAND

Maturity	31
SCN Resistant	Brown Stem Rot Heterozygous
Rps Gene 1c	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 31S32 brand is a consistent-performing soybean that branches nicely to close wider rows in highly productive ground. It features very good standability, making it suitable for any row association, and it excels in poorly drained soils thanks to Rps1c Phytophthora root rot resistance. Avoid placing 31S32 in highly calcareous soils, and for best results, apply a seed treatment if planting early.

NEW

STINE® 31T20 BRAND

Maturity	31
SCN Resistant	Brown Stem Rot –
Rps Gene 1c	Height Moderately Tall

PREMIUM GENETICS ELITE SOYBEANS

Stine 31T20 brand brings a staggering 107% trend to the early 31 lineup. It offers a unique combination of traits and tolerances that promotes adaptability across operations and environments. Good standability supports 15- to 30-inch options and pairs with good 1c Phytophthora root rot resistance for poorly drained, marginal ground. 31T20 should be placed in well- or poorly drained soils and performs best on marginal ground to prevent excessive plant height.

NEW

STINE® 35T23 BRAND

Maturity	34/35
SCN Resistant	Brown Stem Rot –
Rps Gene 1k	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 35T23 brand has a green, branching plant type that holds its color late into the season. This bushy soybean needs to be planted in moderate to lower populations in wide-row operations. 35T23 performs well across soil types but prefers highly productive, moderate- to poorly drained soils. Avoid high-pH soils with this line.

NEW

STINE® 36T32 BRAND

Maturity	36/37
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 36T32 brand is a slightly later version of 35T23 with similar characteristics. It responds well to slightly higher planting populations and performs across soil types. 36T32 has good tolerance to sudden death syndrome, which promotes early planting timelines, and features 1k Phytophthora root rot resistance for placement in moderate- to poorly drained soils.

STINE® 37N32 BRAND

Maturity	37
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 37N32 brand has demonstrated wide adaptability across both high- and low-productivity yield environments thanks in part to its growthy, good-looking plant structure. It features protection against sudden death syndrome and iron deficiency chlorosis, as well as Rps1k Phytophthora root rot resistance for help on highly productive but poorly drained soils.

NEW

STINE® 38T23 *BRAND*

Maturity	38
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 38T23 brand delivers solid agronomics with consistent yield performance. This bushy plant type closes the canopy quickly and should be placed in moderate planting populations. 38T23 can be planted across all soil types but prefers moderate- to poorly drained soils. It has STS tolerance, enabling additional tools to combat resistant weeds and maintain a clean field.

STINE® 42R29 *BRAND*

Maturity	42
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1c	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 42R29 brand is an early group 4 soybean that brings forward a 107% yield trend paired with versatility to perform well in high-yield environments. It has solid performance in both poorly and well-drained soils thanks to Rps1c Phytophthora root rot resistance.

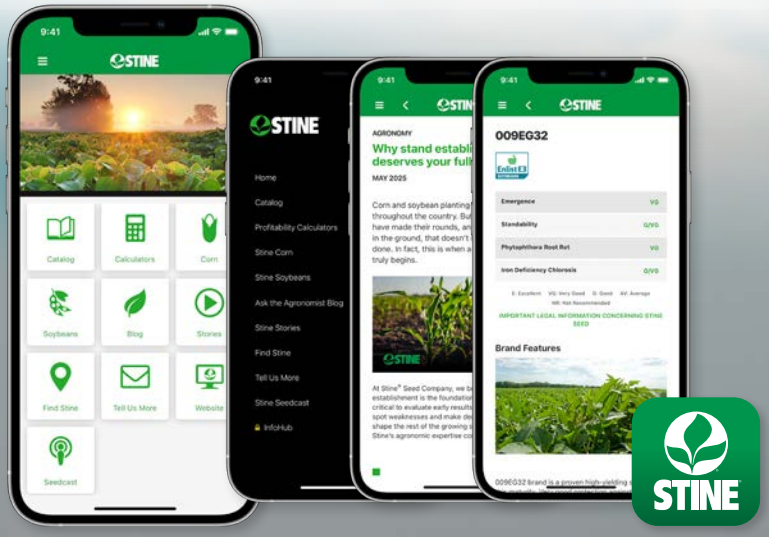

NEW

STINE® 49T32 *BRAND*

Maturity	49
SCN Resistant	Brown Stem Rot Susceptible
Rps Gene 1k	Height Medium

PREMIUM GENETICS ELITE SOYBEANS

Stine 49T32 brand is a population pusher with great standability. Plant it in moderate to high populations across all soil types, and this soybean will deliver the consistency every grower is looking for. 49T32 closes the canopy quickly and maximizes pods per acre to drive yield.

LIMITATION OF WARRANTIES and DAMAGES —

SEED USE RESTRICTION AGREEMENT

This Seed Use Restriction Agreement (the "Agreement") applies to all users ("USER(s)") of the seed ("Seed") contained in this package. If you purchase the Seed, you agree that you and any person or entity, including employees, representatives, contractors and agents thereof, who plant, grow, cultivate or otherwise use the Seed, will abide by these use restrictions. If you open or cause any person or entity to open a package of Seed, you agree that you accept the terms of this Agreement, and you, your employees, representatives, contractors and agents will abide by these use restrictions.

SEED USE AGREEMENT

Stine Seed Company ("STINE") and its suppliers are engaged in the business of developing and supplying for sale various varieties and/or hybrids of Seed. STINE and its suppliers have a substantial investment and expended substantial effort in the development and production of this seed, and in the use of subsequent production of Seed. STINE and its suppliers have existing contractual relationships with other distributors for the sale of seed and expectations of additional contracts for sale of seed from such distributors in the future. The purchase of the Seed includes a limited license to produce a single crop under STINE property rights, including (where applicable) certain U.S. patents which can be found on the package and seed tags.

In consideration of the foregoing, and in consideration of the Seed that USER has been sold or otherwise granted the right to use, USER hereby acknowledges and agrees that the production from the Seed will be used only for feed or processing, and unless USER has an agreement for such purposes, Seed and plants produced from Seed will not be used or sold for seed, breeding, or any variety or hybrid development or improvement purposes; these restrictions apply to all plants produced from Seed, including without limitation variant and inbred plants and Seed that may be contained in this package or grown from Seed. USER acknowledges STINE and its suppliers have a proprietary interest in the use of subsequent production from the Seed and agrees it would be a violation of this Agreement to allow the subsequent production of the Seed to be used to create any seed variety or seed product from said production. Any export of this Seed or its progeny from the country of purchase is strictly prohibited, except that forage or grain may be exported solely for use in feeding or processing.

USER agrees and acknowledges that any use of the Seed, which is forbidden by this Agreement, will constitute a misappropriation of the property of STINE and its suppliers and will therefore result in a breach of this Agreement. USER agrees that STINE and/or its suppliers may bring an action to recover damages as a result of the breach of this Agreement, along with reasonable attorney fees and costs associated with any action commenced in regard thereto. USER further agrees that the exclusive venue for any dispute arising under this Agreement or in connection to any breach thereof shall be in the federal or state courts for Dallas County, Iowa, and hereby irrevocably consents to the personal jurisdiction of such courts. This Agreement shall be governed under the laws of the State of Iowa.

USER agrees and acknowledges that any use of the Seed, which is forbidden by this Agreement, will damage STINE and its suppliers' legitimate expectation of future sales of seed, and any use of Seed in violation of this Agreement will constitute an attempt to intentionally injure or destroy STINE and its suppliers' prospective business expectations in future sales of seed.

USER agrees and acknowledges that any use of Seed from STINE in violation of this Agreement will cause substantial damage to STINE and/or its suppliers, and that if subsequent production of the Seed is used to create a seed variety or seed product, substantial damage to STINE and/or its suppliers for all seed varieties or seed products thereby created will be caused. This Agreement shall not limit any other rights, legal or equitable, that STINE and its suppliers have but shall be accumulative.

USER agrees to only use agricultural herbicides that are expressly labeled for use in conjunction with the Seed and have received government approvals as specified in a product use guide.

NOTICE OF REQUIRED ARBITRATION

Under the seed laws of several states, arbitration, mediation or conciliation is required as a prerequisite to maintaining a legal action based upon the failure of seed to produce as represented. The consumer shall file a complaint along with the required filing fee (where applicable) with the Commissioner/Director/Secretary of Agriculture, Seed Commissioner, or Chief Agricultural Officer within such time as to permit inspection of the crops, plants or trees by the designated agency and the seller from whom the seed was purchased. A copy of the complaint shall be sent to the seller by certified or registered mail or as otherwise provided by state statute.

OTHER TERMS & CONDITIONS

For sale in the U.S. only. STINE assumes no responsibility for STINE's suppliers', distributors' or dealers' verbal and/or written claims, promises, warranties or actions which are contrary to STINE's normal operating policies. USER must notify STINE within fourteen (14) days of becoming aware of alleged issues regarding the quality or performance of the Seed.

LIMITATION OF WARRANTIES & DAMAGES

STINE warrants, to the extent of the purchase price and to the extent that the packaging and label have not been compromised, that the Seed is as described on the package and on the tag attached thereto within recognized tolerances. STINE gives no other WARRANTY, expressed or implied, of MERCHANTABILITY or FITNESS of the Seed for any particular purpose, nor any warranty against loss due to any cause, including environmental conditions, soil conditions, chemicals or farming practices, or the response of the Seed to any such conditions. STINE shall not be liable for indirect, incidental or consequential damages, including loss of profits. STINE'S LIABILITY for damages for any cause, including breach of contract, breach of warranty, and negligence, with respect to the sale of seed is LIMITED to the purchase price of the Seed. THIS REMEDY IS EXCLUSIVE. BY ACCEPTANCE OF THIS SEED OR OPENING THIS PACKAGE, USER ACCEPTS THE TERMS HEREIN. IF USER DOES NOT AGREE WITH THESE TERMS AND CONDITIONS, USER MUST RETURN THE ORIGINAL UNOPENED SEED PACKAGE TO STINE WITHIN TWENTY DAYS OF RECEIPT AND USER'S SOLE REMEDY SHALL BE FOR REFUND OF THE USER'S ORIGINAL PURCHASE PRICE. STINE may modify and amend the terms and conditions of this Agreement without notice and in its sole discretion.

STINE has utilized standard industry isolation and purity procedures in the production of seed products. Because of contamination factors beyond STINE's control, STINE cannot warrant or represent that STINE seed products are free of other transgenic corn traits or transgenic soybean traits. Words and phrases herein shall be construed as in the singular or plural number, according to the context.

IMPORTANT NOTICE: CORN USE RESTRICTION
One or more of the parental lines used to produce this hybrid seed is licensed to Licensee. Licensee grants to buyer, a limited, non-exclusive, non-transferable right to use the product licensed hereunder for the sole purpose of production of grain and/or forage for feeding or processing. Buyer agrees that buyer is not acquiring any rights to use the hybrid or any parental line(s) that may be unintentionally contained herein for purposes other than production of grain and/or forage for feeding or processing. Buyer shall not reproduce or transfer said hybrid or parental line(s), nor subject them (nor the pollen or any other plant part) to any breeding, biotechnology process, gene editing, or any other genetic manipulation techniques, including (but not limited to) tissue culture, genetic fingerprinting or transformation techniques. The parental line(s) may also be protected under trade secret laws. Buyer further agrees, that under these trade secret rights, any parental seed and the genetic material contained herein is confidential and must be maintained in confidence. Export of the hybrid and parental line(s) is prohibited. Unless accepted on the foregoing terms, Buyer shall return the seed in the original unopened container within 15 days of purchase for a refund of the purchase price.

Bayer Product Support receives calls and letters each year about potential seed compliance matters. Anyone with a concern or question can anonymously call 1-800-768-6387.

Seed containing the XtendFlex® traits can only be used to plant a single commercial crop. It is unlawful to save and replant XtendFlex® soybeans. Additional information and limitations on the use of this product are provided in the Technology Stewardship Agreement and the Bayer Technology Use Guide: tug.bayer.com. U.S. patents for Bayer technologies can be found at the following webpage: cs.bayerpatents.bayer.com.

XtendFlex® Soybeans
ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS.
No dicamba may be used in-crop with seed with Roundup Ready® Xtend Technology, unless and until approved or specifically permitted in the state of application. Please follow www.roundupreadyxtend.com/pages/xtendimax-updates.aspx for status updates. Dicamba may harm plants that are not tolerant to dicamba.

Bayer is a member of Excellence Through Stewardship® (ETS).
Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.Excellence Through Stewardship.

Enlist E3® SOYBEANS

XTENDFLEX® SOYBEANS

XtendFlex® Soybeans contains MON 87708, MON 89788 and A5547-127. XtendFlex® technology provides crop safety for over-the-top applications of labeled glyphosate herbicides, labeled dicamba herbicides, and labeled glufosinate, when applied according to label directions.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS.
It is a violation of federal and state law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USES AND APPROVED FOR SUCH USE IN THE STATE OF APPLICATION. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with products with XtendFlex® Technology.

Products with XtendFlex® Technology contains genes that confer tolerance to glyphosate, glufosinate and dicamba. Plants that are not tolerant to glyphosate, dicamba, and/or glufosinate may be damaged or killed if exposed to those herbicides. Contact your seed brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs.

Roundup Ready® Technology contains genes that confer tolerance to glyphosate. Roundup Ready® 2 Technology contains genes that confer tolerance to glyphosate. Plants that are not tolerant to glyphosate may be damaged or killed if exposed to those herbicides. Insect control technology provided by Vip3A is utilized under license from Syngenta Crop Protection AG. Herculex® is a registered trademark of Dow AgroSciences LLC. Agrisure Viptera® is a registered trademark of a Syngenta group company. DroughtGard®, RIB Complete®, Roundup Ready 2 Technology and Design®, Roundup Ready®, SmartStax®, Trecepta®, and VT Double PRO® are trademarks of Bayer Group.

DroughtGard® Hybrids with RIB Complete® corn blend the refuge seed may not always contain DroughtGard® Hybrids trait.

Roundup Ready 2 Xtend®, Roundup Ready 2 Yield® and XtendFlex® are registered trademarks of Bayer Group. LibertyLink logo® and LibertyLink® are trademarks of BASF Corporation. ©2024 Bayer Group. All rights reserved.

B.t. products may not yet be registered in all states. Check with your seed brand representative for the registration status in your state.

IMPORTANT IRM INFORMATION: Certain products are sold as RIB Complete® corn blend products, and do not require the planting of a structured refuge except in the Cotton-Growing Area where corn earworm is a significant pest. Products sold without refuge in the bag (non-RIB Complete) require the planting of a structured refuge. **See the IRM/Grower Guide for additional information. Always read and follow IRM requirements.**

Enlist E3® Soybeans
The transgenic soybean event in Enlist E3® soybeans is jointly developed and owned by Corteva Agriscience and M.S. Technologies, L.L.C. ™ ® Enlist, Enlist E3, the Enlist E3 logo, and Colex-D are trademarks of Corteva Agriscience and its affiliated companies.

Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

Enlist E3 soybeans were jointly developed and owned by Corteva Agriscience and M.S. Technologies, L.L.C. Enlist Duo and Enlist One herbicides are not registered for sale or use in all states or counties. Contact your state pesticide regulatory agency to determine if a product is registered for sale or use in your area.

Enlist E3® soybean seeds containing the Enlist® trait can only be used to plant a single commercial crop. It is unlawful to save and replant Enlist E3® soybeans. Additional information and limitations on the use of these products are provided in the Corteva Agriscience Technology Use Agreement and Enlist® Soybean Product Use Guide. U.S. patents for Corteva Agriscience technologies can be found at the following webpage: www.traitstewardship.com.

Excellence Through Stewardship (ETS)
Corteva Agriscience is a member of Excellence Through Stewardship® (ETS). Corteva Agriscience products are commercialized in accordance with ETS Product Launch Stewardship Guidance and in compliance with the Corteva Agriscience policies regarding stewardship of those products. In line with these guidelines, Corteva Agriscience's product launch process for responsible launches of new products includes a long-standing process to evaluate export market information, value chain consultations, and regulatory functionality. Growers and end-users must take all steps within their control to follow appropriate stewardship requirements and confirm their buyer's acceptance of the grain or other material being purchased. For more detailed information on the status of a trait or stack, please visit www.biotradestatus.com.

Seeds containing the PowerCore® Enlist®, PowerCore® Enlist® Refuge Advanced®, Enlist® Corn - REFUGE and Enlist E3® traits are protected under one or more U.S. patents which can be found at www.traitstewardship.com. The purchase of this traited seed includes a limited license to produce a single crop in the United States. The use of seed from such a crop and/or the progeny thereof for propagation or seed multiplication or for production or development of a hybrid or different variety of seed is strictly prohibited. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Corteva Agriscience Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements.

To plant PowerCore Enlist, PowerCore Enlist Refuge Advanced, Enlist Corn - REFUGE and Enlist E3 seed, you must have a limited license from Corteva Agriscience (or other appropriate affiliates). In consideration of the foregoing, Corteva Agriscience grants to the Grower a limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed.

Enlist Duo® and Enlist One® herbicides with Colex-D® technology are the only herbicides containing 2,4-D that are authorized for preemergence and postemergence use with Enlist® crops. Enlist Duo and Enlist One herbicides are not registered for use or sale in all states and counties; are not registered in AK, CA, CT, HI, ID, MA, ME, MT, NH, NV, OR, RI, UT, VT, WA and WY. Contact your state pesticide regulatory agency if you have questions about the registration status of Enlist® herbicides in your area. ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USE IN THE STATE AND COUNTY OF APPLICATION. USE OF PESTICIDE PRODUCTS, INCLUDING, WITHOUT LIMITATION, 2,4-D-CONTAINING PRODUCTS NOT AUTHORIZED FOR USE WITH ENLIST CROPS, MAY RESULT IN OFF-TARGET DAMAGE TO SENSITIVE CROPS/ AREAS AND/OR SUSCEPTIBLE PLANTS. Additional product-specific stewardship requirements for Enlist crops, including the Enlist Product Use Guide, can be found at http://www.traitstewardship.com.

Syngenta Corn Traits
Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides. Agrisure®, Agrisure Viptera®, Artesian®, Duracade®, DuracadeViptera™ and Viptera® are trademarks of a Syngenta Group Company. HERCULEX® and the HERCULEX Shield are trademarks of Corteva Agriscience LLC. LibertyLink®, Liberty® and the Water Droplet logo are registered trademarks of BASF.

More information about Syngenta corn products is available at http://www.biotradestatus.com/.

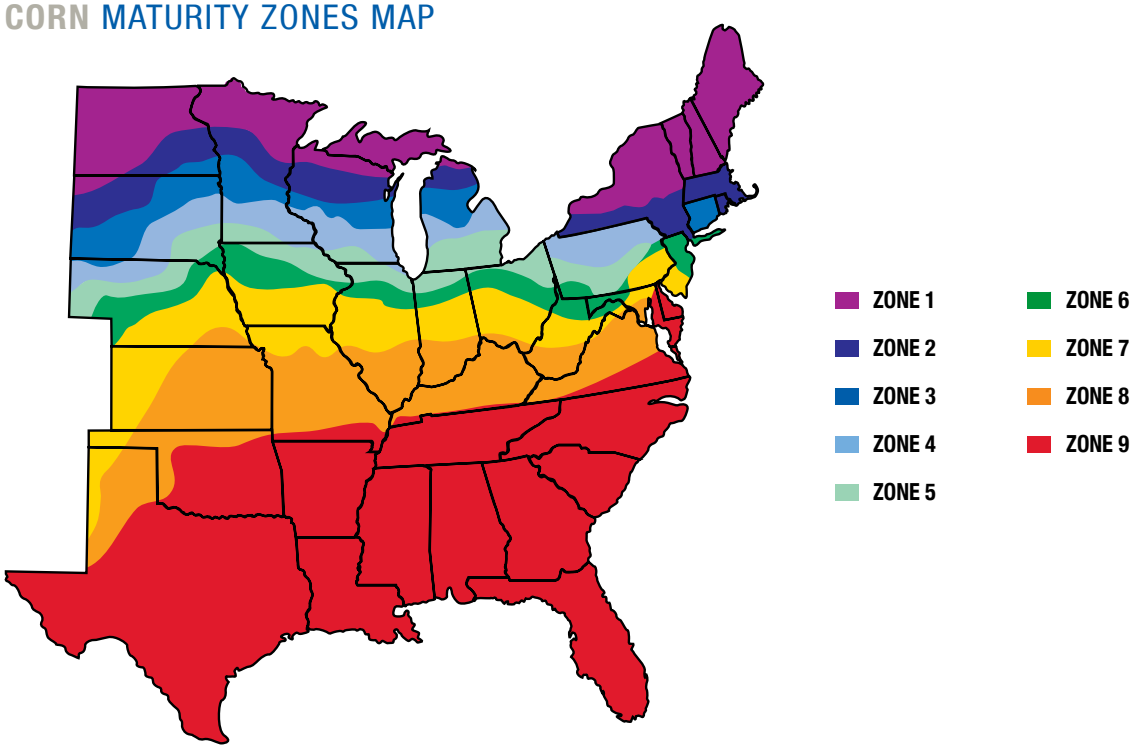

Seed products with the LibertyLink®(LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, post emergent weed control of Liberty® herbicide for optimum yield and excellent weed control.

Corn trait technology incorporated into these seeds is commercialized under license from Syngenta Seeds, LLC. HERCULEX® technology incorporated into these seeds is commercialized under license from Corteva Agriscience LLC.

Respect the Refuge and Corn Design® and Respect the Refuge® are registered trademarks of National Corn Growers Association. All other trademarks are the property of their respective owners.

Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management,** for the biotechnology traits expressed in the seed as set forth in the Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements.
