

The NEW

REWARDS

Introducing Bayer PLUS Rewards

Now you can choose from a bigger portfolio of products to help you make the most of every acre—and watch your rewards grow.

That's the PLUS

Product Portfolio Incentives

Any 2 Products	Earn \$3/A
Any 3rd product	Earn an additional +\$3/A
Any 4th product	Earn an additional +\$4/A
Any 5th product	Earn an additional +\$5/A

Only eligible product purchases will qualify. Incentives will be calculated starting with the highest acre product. See example on back.

Roundup/XtendiMax Incentives

A Roundup® Brand Agricultural Herbicide + 1 or more eligible herbicides	Earn \$2/A
XtendiMax® herbicide with VaporGrip® Technology + Roundup® Brand Agricultural Herbicide + 1 or more eligible herbicides	Earn an additional +\$2/A

Agronomic Add-Ons

Qualify for either a Product Portfolio Incentive or Roundup/XtendiMax Incentive				Earn an additional +.50/A
Aeris*	EverGol Energy*	Ginstar® EC	Raxil® PRO SHIELD	
Autumn™ Super	Gaucha® XT FS	Leverage® 360	Stance® 110SC	
Baythroid® XL	Finish® Pro	Raxil® PRO MD	Trilex® Advanced	

Program Requirements

- > Farmers can earn incentives on up to 5 Bayer products in the Product Portfolio Incentives.
- > Farmers must operate in qualifying geography* and purchase from an authorized retailer between September 1, 2019, and August 31, 2020.
- > Farmers must have at least \$1500 in Bayer PLUS Rewards rebates at the time of redemption to claim incentive.
- > Redemptions requested between May 1, 2020, and October 31, 2020, will be limited to 50% of the farmer's estimated earned incentives at the time of redemption and must exceed \$500.

Comment From Satisfied Customer:
"Used a new fungicide called Delaro this year, it is longer lasting and working awesome."

- Climate is keeping you up to date on:
- Rainfall and Hail Notifications
 - Scouting Notes
 - Field Health Imagery
 - Field Mapping
 - Yield Analysis
 - Fertility Scripting
 - Seed Scripting
 - Nitrogen Monitoring

Cream Cheese Pumpkin Bars

- | | |
|----------------------------|------------------------------------|
| Bars: | Cream Cheese Frosting: |
| • 4 eggs | • 4 ounces cream cheese (softened) |
| • 1 cup sugar | • ½ cup butter (softened) |
| • 1 cup vegetable oil | • 1 ½ teaspoon vanilla |
| • 16 ounces pumpkin puree | • 2 cups powdered sugar |
| • 2 cups flour | |
| • 2 teaspoon baking powder | |
| • 2 teaspoon cinnamon | |
| • 1 teaspoon salt | |
| • 1 teaspoon baking soda | |
| • ½ teaspoon nutmeg | |

1. Preheat the oven to 350°F. Butter a 9x13" pan and set aside.
2. In a large bowl beat eggs, sugar, oil and pumpkin just until combined. In a medium sized bowl sift together flour, baking powder, cinnamon, salt, soda, and spices. Add to pumpkin mixture and stir just until combined. Spread in greased 9x13" inch pan. Bake for 30-35 minutes, or until lightly browned and a toothpick comes clean. Allow to cool.
3. For the frosting, cream together cream cheese, butter and vanilla. Gradually add powdered sugar. Beat until smooth and creamy. Frost on pumpkin bars.
4. Slice into pumpkin squares and enjoy!

58th Annual Working Farm Show
September 13-15, 2019 Geneseo, IL
Featuring Case Tractors & Equipment
Also Featuring Moline Universal Tractors & Moline Plow Company Products
Demonstrations - Exhibits - Food

New Corn Product

Offerings for 2020

5748: 107 RM Smart Stax
5958: 109 RM Smart Stax
6198: 111 RM Smart Stax
6738: 117 RM Smart Stax

65DT710: 115 Trecepta RIB
Trecepta for increased corn earworm protection

5742: 107 RM Double Pro
5952: 109 RM Double Pro
DG6382: 113 RM Double Pro
6632: 116 RM Double Pro

New Soybean Product Offerings for 2020

2RX2830: 2.8 RM XTEND
2RX3120: 3.1 RM XTEND
2RX3340: 3.3 RM XTEND
2RX3450: 3.4 RM XTEND
2RX3839: 3.8 RM XTEND

Stone Seed FortiField Corn Products

5858		5852
6298		6292
6468		6462
6548		6542

Hand-selected by our local agronomist, every Stone Seed FortiField corn product is locally adapted for enduring plant health and advanced protection against tough, local diseases.

Strong Agronomics	Excellent Disease Protection
Emergence	Grey Leaf Spot
Root Strength	Northern Corn Leaf Blight
Stalk Strength	Anthracoze Stalk Rot
Health (Stay-green)	
Harvest Intactness	

Harvest Stalk Rots:

Fields, where stalk rot is developing, should be identified and targeted for early harvest to minimize potential stalk lodging and grain losses.

Stalk rots are favored by good growing conditions early in the season, followed by stress after pollination. Stresses can include a lack of moisture, nitrogen deficiency, foliar disease, hail damage, and prolonged cool, cloudy weather conditions. Extended periods of dry or wet weather prior to pollination, followed by abrupt changes for several weeks after silking, favor the development of most stalk rots. The following are common stalk rots found in corn:

Anthracoze: Symptoms usually occur just before the plant matures. Late in the season, a shiny black discoloration develops as blotches or streaks on the stalk surface, especially on lower internodes

Fusarium: Infection commonly leads to rotting of roots, crown, and lower internodes. Stalks prematurely dry down and are susceptible to breakage. When stalks are split, a whitish-pink Gibberella to salmon discoloration may be visible
Gibberella Stalk Rot: Affected plants may wilt with leaves turning a dull gray-green. The lower stalk softens and becomes straw colored as plants die. Pith tissue disintegrates, leaving only vascular strands intact. The inside of a rotted stalk has a pink to red discoloration. Small, dark fungal bodies called perithecia form on the surface of the lower stalk.

Diplodia: lower internodes become straw-brown, spongy, and dry. The pith tissues disintegrate, leaving vascular strands intact. White fungal mycelium may appear on the stalk surface. Tiny, dark fungal, structures called pycnidia form just under the stalk surface.

Fields should be scouted after pollination for visual symptoms of stalk rot such as discoloration on stalks or early dry-down. Different corn products and fields with different management practices should be evaluated separately. **Healthy stalks are firm and cannot be compressed. If a stalk feels soft, it may be rotted and likely prone to lodging.** Find more information at https://www.stoneseed.com/en-us/agronomy-library/cause-management-corn-stalk-lodging.html?utm_campaign=AgromonyAdvice_REG

Corn & Soybean Crop Protection

ACCELERON SEED APPLIED SOLUTIONS protects against early-season insects and diseases. Acceleron Seed Applied Solutions are Fungicides, Insecticides, and Bio-enhancers designed to protect your seed.

QuickRoots increases yield potential by improving nutrient availability.

QuickRoots is a microbial seed inoculant that contains two powerful microbes that helps release nutrients bound in the soil and increases the availability and uptake of nitrogen, phosphate, and potassium.

BIO RISE CORN OFFERING is designed to enhance mycorrhizal colonization. Which leads to: increase functional root volume. **BioRise 360 St**, increases water and nutrient uptake through the roots. Increased nutrient availability and nutrient/water uptake **increases yield potential.**
